From the Publisher

When a life insurance contract gets crystallized, the insurer envisages that the contract would run to its full length which could often go to a few decades. Accordingly, the insurer makes commitments to deploy the funds prudently so that there is a balance between the assets and liabilities. When the inflows of anticipated premiums get adversely affected, it impedes the steady progress of fund management – eventually leading to disarray in the insurer's financial management.

On the other hand, looking at it from the policyholder's angle, the stoppage of premium payment brings along an equally detrimental proposition. First, the protection that life insurance affords to the policyholder suddenly gets interrupted; and the safety net that is provided to come to the rescue of the dependent family members in case of the policyholder's untimely demise, ceases to exist. Even otherwise, it could bring in a few financial disadvantages like the possibility of the loss of entire premium paid, an adverse rating with regard to future life insurance needs etc; among others. Despite thus being a no-win situation, lapsation in life insurance continues to be in high volumes and calls for a close scrutiny of the possible causative factors.

Financial awareness among the general masses continues to be below par in the Indian domain; and in this regard, the role of the distribution channels for a successful completion of the contractual obligations needs no emphasis. A proper identification of the needs of the prospect, properly supplemented by providing the most suitable solution to the needs, would go a long way in ensuring the long term sustenance of business. Further, a proper assessment of the financial strengths of the applicant – not only at the time of application but also for the period of commitment – would necessarily bring down the levels of business attrition.

It has often been commented that the evil practice of rebating in whatever form is a major reason for several of the discontinued policies. While it is termed as a punishable offence, it should be appreciated that only a voluntary abandoning of the practice could bring in the desired effect rather than an enforced diktat. Further, mis-selling has also been proclaimed as a strong reason for the policyholder not sticking to his/her commitment in keeping the policy in force at all times. The role of the distributor in ensuring that the policyholder is not disillusioned for reasons of being sold the wrong product, needs no special mention. In any case, there is need to ensure that there is drastic improvement in the levels of business retention so that the real purpose of life insurance is served; and that life insurance business is successful in the long run.

'Lapsation in Life Insurance' is the focus of this issue of the **Journal.** Considering the huge importance of the topic, the next issue will also focus on 'Lapsation'.

Global Terrorism Insurance Market Dr. Renu Verma & Dr. Manisha Singh

Reversing the Trend

In the conduct of bilateral transactions, it is not very difficult to explain the role of any one party who tries to take an undue advantage and make a gain out of it; the impropriety associated with it notwithstanding. But when both the sides stand to end up on the losing side, it is simply inexplicable as to how such a scenario can continue to exist. Lapsation in life insurance is one such strange phenomenon which still bothers the insurers and the regulators, especially in the emerging markets. Despite being paid the best attention, it is still one grey area that registers a large incidence in the Indian insurance domain.

Several instances have pointed towards the affordability of the policyholder being at the forefront of such a situation. At the outset, the distributor being the primary underwriter should consider the aspect in all its seriousness before finalizing the deal. Further, insurers should realize that a comprehensive and proper financial underwriting of the proposal would contribute greatly towards putting a brake on the trend. Rather than being obsessed by business opportunities, due attention must be paid to higher levels of business retention. Similar to the prognostic evaluation that is done during medical underwriting, underwriters should also take up the factor of continued affordability of the proposer to the extent possible in order to put a check on lapsation. Besides, the policy servicing that is required to be rendered during the contractual period should not get diluted so that the eventuality of the policyholder deliberately allowing the policy to lapse due to disillusion should not arise.

'Lapsation in Life Insurance' is the focus of this issue of the **Journal**. We open the debate with a detailed explanation of the various opinions associated with lapsation; as also ways to deal with each of these trends in an article by Mr. Srinivasan Varadharajan. In the next article, Mr. Kapil Mehta takes up the discussion of the impact of lapsation on several stakeholders. He goes on to explain various trends in some of the other markets; and how they are addressed. Historically, it has been emphasized that it is always more economical to retain the existing business rather than chasing new avenues. If that is so, how does one explain the high rates of business attrition? Mr. Sandeep Arora throws light on several practical aspects associated with the unsavoury trends and the possible ways to deal with them.

In the 'Thinking Cap' section, Mr. Sankara Narayanan describes the limitations associated with coverage of electrical risks in a Fire policy; and raises doubts over whether some of these need to be revisited. Terrorism has been growing rampantly all over the globe; and has brought several places hitherto unknown, under its fold. Consequently, there is need for having Terrorism insurance in place as one way of combating the menace. Dr. Renu Verma and Dr. Manisha Singh analyze the existing practices and the possible need for augmenting the arrangements - in their Research Article. As always, we have the business figures of life and non-life insurers for the month of June; and the segment-wise performance of nonlife insurers for the month of May.

As anticipated, the response to 'lapsation' as the focus of the **Journal** has been tremendous. Accordingly, the focus of the next issue will continue to be on 'Lapsation in Life Insurance'. Let us look forward to a few more varied opinions on this hugely important aspect of life insurance business.

Exposure Draft on Pension Products

Pensions are an important component of the social security net. The IRDA expects that as the economy and employment grows, the demand for pensions will also rise. The IRDA had earlier required all pension products to ensure an accumulation at a rate of 4.5% which was also indexed to the Reverse Repo Rate of the RBI. Because of the uncertainty in relation to investment returns etc, that requirement of IRDA did not find wide acceptance in the market. The IRDA has since reviewed the position and proposes to expand the option of pension products.

Pension product, in general, are considered to transfer longevity risk from the individual policyholder to an insurance company. Thus, the insurance company has to value and manage this risk which often only becomes evident after a long period of time. It is evident that the two most important sources of risk for an insurance company in offering the pension products are interest rate risk and longevity risk. Longevity risk arises from deviations between realized future mortality trend and current assumptions. If pensioners on average live longer than projected, insurers have to pay more than expected. With regard to investments, life insurance companies have to invest cautiously for any non profit deferred pension product and immediate annuity products. They have to be even more cautious in the terms offered, because the insurer will almost certainly be exposed to significant interest rate risk and reinvestment risk. There is much more uncertainty in setting the assumptions, considering the long term nature of these products.

While the insurer confronts lot of uncertainty in offering the product, the policyholder, who wish to opt for this product, may also face uncertainty in terms of how much to invest or how much accumulation is required to get a pension which enables him/her to maintain the minimum standards of life. In this case it may be appropriate to educate the policyholder, the

premium/ contribution that is required to provide the target benefits or the target benefit that the policyholder might get for the level that the individual intended to pay. Producing both calculations therefore enables the individual to review the target benefit or the intended premium/contribution, to arrive at the most suitable solution. In order to perform such calculations it may be necessary to make assumptions. In practice, several sets of trial calculations may be required showing the effects of the combination of benefits and different future assumptions. Given the variable nature of many of the elements, instead of detailed calculations it may be often appropriate to make broad allowance for minor items.

Quoting an apparently very accurate premium/ contribution rate or target benefit may also be inappropriate or impossible in most circumstances. What is important and expected in these calculations is to indicate to the prospective policyholder/policyholder the variability of the outcome of future events - a different retirement date or different premium rate can significantly alter the perception of the appropriateness of the proposed product.

In this context, pension products offered by the life insurance companies have a special role to play in promoting and protecting the social policy objectives, such as the provision of retirement income. At the same time there are lots of uncertainties surrounding the pension products. The regulatory framework for pension business of life insurance industry needs to consider this unique characteristic of these products. This has led to the perceived need for greater security in the regulatory approach and the emergence of a strong motivation for the introduction of prudential regulation and supervision due to their critical role as an instrument of social policy.

In this background, all the pension products

offered shall comply with the following

1. A pension product (deferred annuity contract) shall have an assured benefit disclosed at the time of sale, where the assured benefit is an amount in absolute terms which becomes payable on the vesting date.

objectives.

2. For the purpose of financial planning, any pension product offered by the insurer shall comply with the sales literature guidelines issued by the Life Insurance Council circular number LC/SP/Ver 1.0 dated 3rd February, 2004 and shall also necessarily disclose:

2.1 An illustrative target purchase price for each policyholder considering the premium payment capacity, age, vesting age and the future expected conditions.

2.2 Possible risks involved, if any, in meeting the targeted purchase price.

2.3 Possible risks involved, if any, in purchasing the targeted pension rate/annuity rate.

2.4 An illustrative target annuity/pension rates for the illustrative target purchase price.

3. Any pension product offered by the insurer may have an optional insurance cover throughout the deferment period or may offer riders, which are approved under the file and use procedure.

4. At the date of vesting or at the date of surrender, the policyholder shall be given an option to commute up to a 1/3 rd of the amount realized.

5. At the date of surrender, the balance amount remaining after commutation shall be utilized to purchase pension, guaranteed for life, at the then prevailing annuity/pension rate.

6. At the date of vesting, the balance amount remaining after commutation shall be utilized to purchase pension, guaranteed for life, at the then prevailing annuity rate.

7. The prevailing annuity rate shall mean the annuity rates that shall be allowed to be applied to each of the pension products as per the latest approval accorded by the Authority as per the file and use procedure.

8. If the policyholder dies during the deferment period, the nominee shall be entitled to:

8.1 Utilize the entire proceeds of the policy as on that date including the rider benefits, if any, or part thereof for purchasing an annuity at the then prevailing rate; OR

8.2 Withdraw the entire proceeds of the policy;

9. At the time of vesting, the annuity shall be provided by the same insurer who contracted the original deferred annuity policy.

10. All the unit linked pension products shall comply with IRDA (Treatment of discontinued linked insurance policies) Regulations 2010.

Note: For the purpose of this circular:

1 For the purpose of illustration:

i. Target purchase price shall mean the accumulated value of the premiums/ contributions accumulating at an illustrative rate of 4% and 6%, which is expected to meet the policyholder's pension needs after allowing for commutation.

ii. Targeted pension rate shall mean the pension that a policyholder expects to receive at the date of vesting at an illustrative rate of 4% and 6%.

2 An assured benefit shall mean any guarantee such as any of the following options:

i. Providing a minimum return (non-zero positive return, as per the approval accorded by the Authority) on the premiums paid during the period of contract, which shall be disclosed at the time of purchase of contract;

ii. Providing a guaranteed maturity benefit (in absolute amounts) payable at the vesting date, and which shall be disclosed at the time of purchase of contract;

iii. Purchase a guaranteed annuity from the date of vesting which shall be disclosed at the time of purchase of the deferred annuity contract.

Dealing with Dexterity

'While it is important to carry on with the time-tested practices in rendering service to the policyholders, insurers should have a constant research in place to augment their efficiency levels in order that the incidence of business attrition is reduced' observes U. Jawaharlal.

Continuing with the debate on 'Lapsation in Life Insurance', the role of the distributor in life insurance business has always remained a very strong point in most emerging markets; and accordingly, it would not be out of place to look at various aspects of business wherein the distributor can play an important part in arresting the discontinuance of policy contracts. One gets to hear very often that a policyholder has discontinued payment of premium in disenchantment as he or she was sold the wrong product – different from what was explained at the time of entering into the contract.

While conceding that the low awareness levels of the applicant could have been taken advantage of, would it not be prudent for an applicant to thoroughly assimilate the contents of the prospectus before signing the declarations? Further, as a progressive development in the liberalized market, there is a free-look period associated with the insurance policies by virtue of which the policyholder can forfeit the policy in case of not being satisfied with it. How often do we get to see the policyholder making use of the free-look clause? In this background, the argument that a wrong product was sold does not hold much water, at least in the case of the literate policyholder. There is a 'user-manual' syndrome associated with life insurance policy whereby we do not care to read the policy contract in detail, until getting confronted with a problem. Isn't it time we got over such naiveté?

For the distributor, the opportunity of bringing new prospects into his business portfolio should be looked at as an opportunity to serve also; and not merely to sell. Identifying the needs of the prospect, suggesting viable alternatives and finally clinching the most suitable product would be the perfect recipe for maintaining long-term relationships. Being driven by short term goals like a higher initial incentive, fulfilling a business target etc would best be avoided to ensure that the policyholder has a motive to fulfill his contractual obligations throughout the contract period.

The good work done by the field force should ably be supplemented by the administrative staff. Completing the formalities associated with the issuance of the policy bond without loss of time, bringing the requirements to the notice of the applicant with alacrity, registering changes in policyholders' addresses on a real time basis are examples of ensuring that there is constant rendition of services to the policyholder which will add to the business persistency of the insurers, however mundane they sound. While these are some of the age-old practices of life insurers, no effort should be lost in identifying novel methods in improving genuine business retention.

'Lapsation in Life Insurance' will be the focus of the next issue of the **Journal** yet again but with a fresh set of articles and a fresher approach.

Lapsation in Life Insurance

Factors, Strategies and Tactics - Management of Lapse

Srinivasan Varadharajan opines that while there are several reasons for the lapsation of a life insurance contract, insurers must adopt proactive measures to ensure that commitments made by the policyholders are honoured.

Introduction:

This paper deals with Life insurance policy lapses. In general, Life insurance is a long term contract. While the insurer has the obligation to provide coverage as along as the policy is in force and does not have an option to foreclose, the customer has the right to stop paying the premiums at will. Also, for retail customers the insurer does not have the benefit of Experience rating, like the possibility of periodical revision of premiums in the case of Group insurance. So any insurer would like to have an accurate understanding of the lapse rate for any particular block of policies. Any variance in lapse rate would affect the valuation and reserving; and pricing assumptions have to be revised for future products.

This paper dwells on the individual economic and financial factors that cause lapse. Then the impact of lapse on various stakeholders is discussed. Also a model is suggested to arrive at the probability of a policy getting lapsed due to a chosen variable. Finally the paper proposes the strategies for the insurers to handle policy lapse and the operational tactics that can be deployed to hold the lapse rate to the assumed levels. The entire discussion and proposals are biased towards Indian insurance scenario even as most of them are relevant across the geographies.

Measure of lapse:

There are small differences in the way lapse is defined across various countries.

In the Indian context, a policy is treated as lapsed if the premium is not paid within a period ranging from 15 to 60 days.

Lapse Ratio during the year = Lapses (including forfeitures) during the year/Arithmetic Mean of the business in force at the beginning and at the end of the year.¹

A LIMRA/SOA sponsored study defines as, Annualized Policy Lapse Rate = [Number of policies lapsed during the year/Number of policies exposed to lapse during the year] x 100

Number of policies exposed to lapse during the year is arrived from total number of policies at the beginning of the year and deducting the death, term expiry, maturity and conversion policy count from it."

Generally recognized Factors:

A. Sales process:

Any mis-selling will create cognitive dissonance leading to early lapse. It could be that matching of customer needs with the product was not properly done, or sustained customer affordability was not taken into account while selling an appropriate product.

B. Surrender Charge Structure:

If the surrender charge structure causes losses by way of negative returns vis-à-vis premiums paid, this will prevent lapse and hence is a factor. It should be noted that this feature also has caused a secondary market Any variance in lapse rate would affect the valuation and reserving; and pricing assumptions have to be revised for future products.

ž

In a falling market, term deposits may be seen as a better investment than insurance and in a rising market direct investments in stock and mutual funds may be seen as better performers than insurance.

for life insurance policies. Therefore the fact that the effect on surrender charge structure on policy lapse rates gets artificially accentuated due to the arbitrage opportunities available, should be considered while modeling the product design assumptions. Also, the lifting of surrender charge regime provides some sort of encouragement to surrender.

C. Personal circumstances:

This is the most important factor in lapsation and the least controllable. It is suggested that better analytics be used in predicting this factor. Also this paper contends that this is geography specific as well and goes to show that the Indian

Example: Let us consider an individual aged 25. Present Age = 25 (t) scenario has its own set of reasons which triggers lapse.

Indian people in general have a different set of social obligations. As popularly acknowledged, joint family system even if its practice is being widely disregarded has its impact on Indian society. Even nuclear families (which are very different from nuclear families of the developed world) include unmarried adult children. These all translate into unique pressure points which have to be taken care of. In an example below we try to portray the impact of social obligations an individual has, to show that they are not trivial.

Annual Income = 5 lakhs

Period	Lump sum Need	Present spending	Need Value at the period
(t + 16)	Child School Education	1 lakh	5.16 lakhs
(t + 20)	College Education	2 lakhs	15.55 lakhs
(t + 23)	Professional Education	4 lakhs	42.31 lakhs
(t + 25)	Marriage Expenses	3 lakhs	38.96 lakhs
(t)	Extended Family Support	0.5 lakhs	0.5 lakhs

Accumulations already present:

(t) Fixed deposits

Assumptions:

- Impact of Demand Supply curve on the expenses is not taken into consideration. Only an interest factor of 10% impacted by an 8% inflation rate is considered.
- 2. One child family is assumed."

As shown above, these unique financial need points in time have to be considered for analytics. The authors agree that present insurance forms may not capture the details required for analytics as they are not needed from an underwriting perspective. But the field force should be encouraged to record the profile of the life proposed as this would help them in getting further business even as it helps the insurance company to do better analytics.

(1) lakhs

D. Present value:

The worth of any investment as a factor to lapse or to persist is a largely relative measure. For example, in a falling market, term deposits may be seen as a better investment than insurance and in a rising market direct investments in stock and mutual funds may be seen as better performers than insurance. Of course, any scientific time value of money calculation is not largely considered as behavioral finance drives this factor rather than any actuarial calculation.

E. Extraneous factors: Tax benefits & Collateral credit:

Tax benefits are a huge driver in insurance sales. The possible removal or restriction of

tax benefits could be a factor to lapse. Also introduction of benefits to other instruments competing with life insurance will also be a factor to lapse.

If a life insurance policy is taken as a collateral for availing any credit facility such as housing loan or for any heavy investment, unless the policy face amount is directly linked to the balance credit in which case the policy will normally expire the closure of credit will be a factor to lapse as the specific reason for taking out the policy is no longer there.

F. Commission structure:

A heaped commission structure is more associated with lapse than a levelized or trail commission structure as there is incentive for the sales force to generate more new business than service the old business. This in fact leads to churning which is a headache for the insurers the world over.

G. Economy:

Life insurance is mostly considered as a discretionary purchase rather than a mandatory one. As premium payments are a form of renewing the purchase decision, a fluctuation in disposable income levels will influence policy lapse. Amount of disposable income increases with increasing income levels. In case of a recessionary economy, where there is negative growth, reallocation of available resources will happen and hence society as a whole will see an increase in policy lapse. This is a systemic risk as it affects the whole of society. It is also possible that a particular section of the society is affected like when a single industry like aviation is seeing a downturn. But this is rarely the case as the after shocks of a collapse of any industry would reverberate across all sections of the society.

H. Product features:

Policy owners sometimes need access to their invested funds and instruments which

facilitate this will see better persistency than which does not. A good example is term products have higher lapse rates than endowment or whole life products.

Apart from the factors described above the life settlement market too causes a variation in assumed lapse rates. A life settlement is a financial contract where the insured assigns the policy to a third party institution which pays the policy holder more than the cash value payable by the insurer. After assuming ownership the third party continues to pay the premiums and is the beneficiary for all claim payments on the policy. The life settlement market exploits the undervalued (by the insurer) policy contracts which are in danger of lapse due to the inability of the policy owners to pay the premiums. The typical targets are the policy owners whose increased mortality makes the present value of the contract much more than the cash surrender value offered by the insurance companies.

Impact of policy lapse on various stakeholders:

Customer groups:

Policy lapse affects the customers in three ways:

- On lapse, customers lose the insurance coverage and more often than not, the insurance need is acute at the times of lapse (one example is where the insured is out of work due to illness and hence unable to pay premiums).
- 2. Customers get a reduced return if any; from the lapsed policy as discount factors tend to get applied to the paid-up value.
- As a class, customers will be affected by higher lapse rates as the cost gets passed on to them by way of higher premiums (in future product pricing) or lower bonuses.

Insurer groups:

Insurers do provide for policy lapses even while designing the policy. The challenge is to

Life insurance is mostly considered as a discretionary purchase rather than a mandatory one. As premium payments are a form of renewing the purchase decision, a fluctuation in disposable income levels will influence policy lapse.

If a customer lapses a policy, not only does the agent lose his renewal commissions, it also becomes tough to sell another policy to that customer as the losses on his first policy would have created a negative thought in his mind.

\$

accurately predict the lapse rate for a particular product and for a particular block of policies. For fixed premium policies, insurer actuaries have to be accurate as possible. If lapse rates are higher than predicted, insurer stands the risk of losing his margins.

FSA, UK in its Prudential Standards mentions that 1.2.54A (2) In identifying its homogeneous risk groups, a firm should consider all risks that impact on the level of expenses borne by contracts including persistency risk and expense inflation risk. For example, business that is subject to bulk lapse risk, such as any large group contract that would give rise to a reduction in surplus on lapse, should be considered as forming a homogeneous risk group of its own.

In case of level premiums, in the initial years, the premium paid is more than what is required. So if the policy lapses, the life insurance company pockets the so-called lapsation profits, which is factored into the pricing of the life insurance policy to start with. Life insurers have to contend with pricing for lapses as well as pricing for the possibility of policy not lapsing due to settlement contracts which artificially extends the term of the contract.^W

Sales force:

Reducing policy lapse and increasing persistency benefits the field force a lot. If a customer lapses a policy, not only does the agent lose his renewal commissions, it also becomes tough to sell another policy to that customer as the losses on his first policy would have created a negative thought in his mind.

Hence it is better for the agent to capture the financial, economic and social profiles of his customer even as he sells a policy to him/her, and use it for lapse prediction and diligent follow-up. Such activities would create trust in the minds of the customers.

IRDA too has recognized the importance of distribution channel in decreasing lapse. In February this year, IRDA, under Section 14(2) of

the IRDA Act, 1999 has issued guidelines requiring agents and insurers to enhance persistency of life insurance policies. The new guidelines among other things mandate 50% persistency for agency renewals till the financial year 2014-15 and 75% persistency after that. This alone is bound to play a major role in controlling lapses and it would benefit all the stakeholders including agents themselves and policyholders.

Suggestions to bring down lapse:

- A. Regularizing the sales process and strict monitoring of the field force by the insurer. The field force should be educated of the exact target segment a product is designed for and should be instructed to sell only to them. Rigorous control over the sale process may even result in loss in quantity, but quality will be ensured and hence valuation will more closely follow product design assumptions. Also documentation of financial need analysis of the client done at the time of sale should be made mandatory.
- B. The surrender charge structure should be designed in such a way that it is a big reason for policy holders not to lapse. Having said the same, one would wish to mention that such an inhibitive regime be tempered with access facility to invested funds such as policy loans. Of course there is very little leeway in designing the surrender charge structure as it has to comply with regulator norms. In this context, the authors wish to point out that an unidentified insurer has notified Kansas State insurance department that it intends to implement a policy loan program that would allow inforce policy owners who meet certain underwriting criteria to avail policy loans as a percentage of death benefit rather than surrender value." This is to pre-empt artificial manipulation of lapse rates through secondary markets.
- C. Personal factors should be better predicted through analytics. A typical Indian person's

life cycle over time should be drawn out with the money need points mapped. To this any time bound factors which prevent a policy from being renewed – education expenses, marriage expenses, retirement – should be added. This would yield in better prediction of "in-danger-of-lapse" policies and result in sharper focus on renewing them. This would also help in accurate product design.

- D. Perceived Present values of insurance contracts are not controllable after issue. Rather product feature design has to take care of embedding features which get high returns. The popularity of unit linked products is a pointer to this. Better positioning of the product can mitigate the effect of return rates on lapse rates.
- E. Extraneous factors like tax benefits even while used for attracting the customers to an insurance product should not be used for selling the product. This is easier said than done as more than often insurance contracts are sold as tax benefit instruments rather than insurance products as such. Only proper education of sales force can reduce, if not completely remove this effect.
- F. Unique ID for agents: The prevalent commission structure is an unintended factor in causing lapsation. The straight forward way to resolve this would be to levelize the structure or provide more incentives for persistency. This might involve additional expenditure. While this would not have been taken into account during design of existing products, for new products too a thinner spread of commissions may make the product to be perceived as non-remunerative. The authors suggest an entirely different approach. A nationwide database of agents, very similar to National Skills Registry of NASSCOMM can be created. Just as every new employee of an affiliate of National Skills Registry is required to

provide a unique NSR ID number, agents may also be given a unique ID.^{vi} This unique ID should be used to verify past persistency levels of the agent while he moves from one insurer to another. Any data available in the database should be scrubbed of company specific information. If such a database can be created agents' performance can be linked to an incentive concept very similar to "No-Claim" bonus of auto insurance. The persistency ratio of any particular agent should be matched against the persistency ratio of the company and only the relative measure should be used to increase or decrease the commissions paid. Since setting up of this central repository and maintaining it is a huge effort, no single organization can achieve on its own. All the insurers need to come together and set up such an initiative.

- G. Any systemic hazard affecting the lapse ratio of an economy as a whole can never be easily modeled. Even past data can only be a rough indicator over the long term. One suggestion which could make the lapsation irrelevant is developing a mandatory term insurance, a la Employees Provident Fund. This will be a low cost insurance whose face value is tied to the basic pay of an employee. Since it is mandatory, coverage lapsation will be out of question. Such a mandatory scheme will also help the families of employees at unfortunate death of the insured.
- H. Though it is impossible to design products solely on the basis to ensure persistency as market needs drive product design, care can be taken for better selection of lives for a particular product line. The match between a life's current profile in terms of his/her socio-economic characteristics and the purchased product should be as intended by the actuaries.
- I. Ensuring better customer understanding of the product's nature. The better the customer understands a product it would

13

if personal conditions of a customer are deemed to affect the persistency of a policy, the task would be to gather the personal profiles of the customers of lapsed policies, at the time of lapse.

help that much to map the product to the customer's perceived needs. And the realization of the customer of his/her needs that the product is meeting will ensure that the customer keeps the product in force.

Approach to arrive at net correlation of factors to lapse rate:

Causal Analysis

The first step in understanding the lapse rate is the causal analysis. A careful research could throw up more than the 8 factors listed here. For example distribution channel could also affect the lapse rate. To determine this, reasonable quantities of data should be collected for different distribution channels. Also premium modes a customer chooses will definitely encourage or not affect lapse. This can be studied easily. Socio-economic conditions already mentioned under personal factors above should be extensively collected. The U.S and U.K studies on persistency also collect the information on the policy year of lapse. If this is found to be a factor in Indian scenario as well, the high risk period for lapse can be identified and be better controlled through intervention at the right moment. The intervention could take the form of increased mailers to the customer, encouraging field force to approach the customers at the onset of the high risk duration, suggesting more convenient forms of premium payment etc.

Data collection:

The second step would be to collect the data on each of the identified factors. This is a rigorous work and would be difficult if not impossible, for some of the factors. For example, if personal conditions of a customer are deemed to affect the persistency of a policy, the task would be to gather the personal profiles of the customers of lapsed policies, at the time of lapse. This is easier for present and future lapse occurrences than for past lapses. Deeming commission structure's effect on lapse is more of a hypothesis as different structures of commission are not available for comparison and validation.

Identifying the factors of lapse and their impact:

Lapsation can be considered as a binary state where a policy can be considered to have been either lapsed or not. All policy statuses such as in-force, matured, death claim can be clubbed into a single "Not lapsed" state and other statuses such as lapsed, paid-up, surrendered can be taken as "Lapsed" state.

Such a variable (Policy status) with a binary outcome ("Lapsed" or "Not Lapsed") can be analysed using binary logistic regression to arrive at the factors that impact it. The affected variable is called the Dependent Variable (DV) or Categorical Variable and the factors which impact it are called Independent Variables (IV) or Explanatory Variables.

Regression modeling deals with explaining the movements in variable by movements in one or more other variables.^{vii} In Generalized Linear modeling which has evolved from Simple Linear modeling, the dependent variable (Lapse rate here) is ascertained as a transformation (logit) of its expected value (P).

If y is policy status which will take the values (lapsed) or 0 (not lapsed) and is the probability that y = then the odds of y, P, are / (-). Logit, or the log of the odds is defined as log(odds) = logit (P) = ln [/(-)].

The general form of the logistic regression model is

In[/(-)]=? +? + ++? , ,
where , ,.... , are the explanatory variables
and the values of are the regression
coefficients.

Reducing to a single explanatory variable,

$$ln[/(-)] = +$$

$$[/(-)] = e^{(+)}$$

$$= e^{(+)}/(+e^{(+)})$$

Any Maximum likelihood estimation technique like Newton-Raphson iteration is then used to estimate ?for the various values of x paired with the (0,1) response of y.

)

आई आर डी ए टोटा

Examples of explanatory variables are age, income, policy year, cash value, product type and any such quantifiable economic behaviour.

The final and ongoing action items will be to apply the equation for controlling present lapse rate and future lapse rate analysis and for future product design.

Strategies towards better lapse management:

The three strategies that the insurers should adopt for accurate lapse rate design are:

1. Aggressive adoption of continuous KYC philosophy:

The soliciting of data pertaining to KYC should not stop with New Business. The KYC data acquisition should also be proactive. For example, the field force can be asked to file a quarterly customer profile change report. All customer interaction touch-points should query the customer on the known economic factors affecting lapse. Also financial need analysis can be proactively be carried out to provide a status check to the customer whether he or she is sufficiently insured on increasing age as well as income levels.

2. Product design involving lapse moderators: The product design should encompass lapse moderators. These features can range from simple riders such as No-Lapse Guarantees (NLG) to identifying the pressure point timelines on the targeted customer demographic and designing for providing/introducing benefits on them. The products benefit deliverable should not only be need based but also based on the timing of the needs. For example a traditional policy can be introduced with commutation features with the commutation option at either pre-defined or customer opted intervals. Customizing benefit delivery timelines within design constraints addresses not only the insurance need but also the need to pay the premiums. Automatic premium loans

where premiums are loaned against the collateral of the cash value are also an example. Focusing on single premium policies is a good idea to control lapse. Another example could be selling ULIP policies where the death benefit is the values of the units at the time of death. This may not directly prevent lapse but will remove the effect of lapse on insurer's reserves.

3. End to end marketing-From product features to servicing features:

Marketing should not be confined to the product features. Focussed marketing should also be done on the servicing features that are there to be utilized by the customer. The servicing features can range from call center support, multiple premium payment options like online and mobile payment channels. Not only customer friendly servicing features should be introduced but also should be proactively marketed to the customer.

Operational tactics to govern lapse rates:

Successful deployment of the strategies to manage lapse rates needs suitable vehicles of delivering them. This involves analyzing the strategy and identifying action items which would enable implementation of the strategy and aligning the organization dynamics along the stated goals. For example, among the below proposed operational action items, the first three map into the strategy of aggressive adoption of continuous KYC philosophy. Such alignment of evolution of strategy into tactics into activities would yield better overall results. Provided below are some of the operational initiatives towards better persistency management.

- 1. Ensuring integrity in customer ID creation and capture
- 2. Periodical dispatch (online and offline) of customer detail update forms
- 3. Proactive update of customer details (including changes in the family structure) by the field force

ž

Agents are also given a list of customers whose premiums fall due in the next 30 to 90 days. This is done for the agents to follow-up aggressively and to ensure policies stay in force.

\$

- 4. Fine-tuning the lapse control measures that are already in place like follow-up on non-receipt of premiums
- 5. Informing the customer of policy no lapse features such as APL, NLG etc. in case premiums are delayed
- 6. Systematic sharing of the analytics data with the field force for accurate targeting of potential defaulters
- 7. Partnering with bill aggregators which for a fee offer a single window to the customer for all his/her bills

Reaction of Indian Insurers to Lapse rates:

However small the body of work on policy lapses may be, Indian insurers are pro-active in controlling lapses. For example many insurers send out short messaging service (sms) messages to remind the customers when premium is due. Multiple premium due notices are also sent out. Further, agents are also given a list of customers whose premiums fall due in the next 30 to 90 days. This is done for the agents to follow-up aggressively and to ensure policies stay in force. Premium default letters are also sent after the due date.

Conclusion:

Regulators like the FSA in UK and trade bodies like LIMRA of the U.S. issue reports on persistency on a regular basis. This helps track the lapse rates over a period of time and also serves as a good benchmark for individual companies to rate themselves in the specific geographies.

IRDA annual reports show that lapse rates vary greatly among the Indian insurers. If insurers are forthcoming in sharing their data to an organization agnostic and Indian industry specific study, then the lapse factors common to all the insurers and lapse factors specific to organizations can be recognized. This would help all the organizations involved. A sanitized report could be published at a regular frequency for public consumption.

Also, adoption of organization independent unique IDs such as the Aadhar can be used for across industry identification of propensity to lapse. Such an initiative would no doubt, be very welcome in the Indian context, where the year on year growth is very healthy.

Dealing with Lapsation - A Customer's Perspective

Kapil Mehta opines that insurers and intermediaries have a responsibility to make sure that customers understand all conditions clearly, in order that the evil of lapsation is checked to a great extent.

High lapse of life insurance policies is one of the most serious issues in the Indian market place. On average about 20 per cent of policies lapse in the first year. In some companies and in some product lines, lapses are much higher. When applied to the large base of policyholders this is a big number. It implies a high degree of financial losses for policyholders and general dissatisfaction with the products they had purchased.

The view on the impact of lapses is not uniform. Surprisingly, different stakeholders see the issue very differently.

Stakeholder's varied perspective on lapses

Customers

Customers are the worst affected by lapses. In general, they have a significant financial loss in the form of a surrender charge. Also, there is an opportunity cost as the premium amount could have been deployed productively elsewhere, and the cost of purchasing insurance increases with age.

Intermediaries

In general intermediaries such as individual agents, corporate agents and brokers are focussed on the first year compensation from an insurance sale. Renewal commissions are small (typically 5 per cent of premium in traditional policies) and it may not be profitable for the intermediary if there is considerable follow-up work required for renewal.

The situation is aggravated because many agents have low productivities and invariably become inactive over time. For all practical purposes they lose interest in soliciting or renewing insurance. In banks and other corporate agents, the issue is different. High attrition levels, frequent transfers and lack of training of the sales staff are an important reason for poor persistency.

Insurers

The impact of lapses on insurers is more complicated. Good, long-term oriented insurers understand that a lapse results in loss of a long term cash flow and the resultant profits. There is also loss of reputation each time a company's insurance policy lapses.

However, sometimes, lapses may actually increase an insurer's profits in the short term. Several products are lapse-supported. This means that, because of the high surrender charges, lapses may actually increase shortterm profits. This creates a tension as, often enough, meeting short term objectives is important for the insurers.

Further, in some markets, even the long term impact of lapses can be positive for the insurer. Taiwan is one such example. Policies that were sold there a decade ago were embedded with high guarantees as interest rates were at a peak at that time. Over the years interest rates in Taiwan have reduced considerably and to such an extent that many of the policies are unprofitable for the insurer. In such a situation, insurers can actually create significant long term value by lapsing policies. Customers have realized this and therefore persistency in these markets is high. Several insurers have now exited this market because of the unfavourable insurance economics. There is a lesson here about the risks of offering high guarantees but that is the subject of another article.

In summary, the impact of lapses on insurers is

The situation is aggravated because many agents have low productivities and invariably become inactive over time. For all practical purposes they lose interest in soliciting or renewing insurance.

The lapses on term products tend to be the highest and one of the reasons is that policyholders feel that they no longer need death protection.

not always clear and there can be several conflicting outcomes. This makes it critical for regulators to take the right steps and for consumers to be more aware about insurance.

We must understand why policyholders lapse their policies. Do they understand the costs involved and the options available?

Why do customers lapse policies?

Understanding the root causes of lapses is the first step to addressing the issue. There are several reasons why policyholders lapse policies:

- A surprisingly large number of people do not even realize that the policy has lapsed. This is because most individuals are notoriously poor in systematically keeping track of their finances. It is common to have individuals pay their premiums for years and then suddenly slip up on payment in a particular year.
- b) Many a time, the reminder notices or calls by an insurer are the call for action for a consumer to renew their policies. If for some reason the company fails to remind customers of their obligations then the policy is very likely to lapse. Failure on the part of the insurance company is not deliberate. Often enough, policyholders change homes or phones and do not provide updated information to the insurance companies.
- c) In many instances, policyholders terminate a policy deliberately. Here too, quite often, termination is instigated by the advisor and driven by his desire to earn first year commissions once again. This is called replacement of policies and is illegal in many countries including India. The main challenge in curbing replacement is to systemically track it. If a company has thousands of agents it is hard to determine when replacement has occurred.
- d) Then there are cases where the customer was mis-sold a policy. On becoming aware of this, he decides to terminate the policy. This is a serious breakdown of the solicitation process. It is not enough to say that all policy details were provided in the terms and conditions of the policy. Insurers and intermediaries have a responsibility to make sure that customers understand all conditions clearly.

e) Finally, customers may lapse a product if their needs change or new, much improved products enter the market. Both these situations are market realities in India. The lapses on term products tend to be the highest and one of the reasons is that policyholders feel that they no longer need death protection. An improvement in prosperity; changed financial circumstances can lead to this. Many a time customers realize that significantly cheaper term products have become available.

A structural change in ULIPs driven by the regulatory changes last year could also result in higher than normal lapses. The new ULIP products are much more attractive for customers as there are restrictions on how much insurers can charge customers. Many policyholders may be tempted to replace their products with the new ULIPs – particularly if their old policies have been active for a long time and surrender charges are minimal.

f) Lapses due to financial shocks or a liquidity cash crunch.

During a liquidity crunch some policyholders seek to cash out their policies. The immediate cash requirement in their mind supersedes the long term benefits of keeping the policy active.

What can stakeholders do to reduce lapses? *Insurers*

To address the issue insurers must:

- Design products that minimize the risk of inadvertent lapses. Single premium products are one such example. These are once-and-done products and can often be very cost effective for customers. Another product feature that is common in the US and Japan is the no-lapse guarantee. The product feature ensures that even in traditional products, once a minimum premium has been paid the death benefits on the products are guaranteed not to lapse even if the remaining premiums are not paid in a timely manner.
- 2. Automate premium collection. Cash collection in the country is complex. There are several areas where bank penetration is low. Even if a customer wants to make a payment it may be administratively difficult. Insurers can address this issue by

increasing ECS mandates or, in the urban areas, ensuring automated credit card payments. These are not fool proof methodologies but do go a long way in improving persistency because people tend to keep their bank accounts and credit cards unchanged over the years.

- 3. Build an effective technology system to identify replacements. As mentioned earlier, replacement is when an agent encourages a customer to lapse an existing policy of theirs and replace with a new policy. This seldom benefits the customer but helps the agent earn a higher commission through the new sale. This process is not allowed by the regulator. However, effectively monitoring replacement in the market place is difficult and requires effective technology. Insurers must also actively discourage replacements by taking strict action on defaulting agents, even if they are high performers.
- 4. Finally, insurers have to keep strengthening their ability to deliver renewal notices or reminder calls to customers. Contactability of customers is another big issue in the industry and can only be addressed by ensuring that the information collected while selling the product is accurate and reliable.

Intermediaries

For intermediaries the priority is to develop a long term orientation on the business. Key initiatives would be to:

- Build a stronger community to share best practices. There is a small but growing segment of agents who embody the best practices of life insurance solicitation. Their renewal performance would be second to none in the world. These high performing agents need to be showcased within the agent community.
- 2. Build stronger cross-selling capabilities. Intermediaries may find that cross-selling can get them very good results, perhaps more attractive than searching for new clients. Cross selling results in an individual customer becoming more valuable for the intermediary. This forces the intermediary to move towards a more comprehensive

key account management and relationship based approach. Such approaches do tend to increase customer's satisfaction levels and enhance renewals.

Regulators

In order to reduce lapses, regulators must:

- Discourage lapse-supported products. Insurers need to have their products approved by the regulator prior to launch. The Authority must take a hard look at products where profitability increases with an increase in lapses.
- 2. Publish a consolidated list of renewal persistency each quarter similar to the new business sales that are published. This will help bring about customer (and media) focus on the issue. The Authority's initiative to link the renewal of an agent's license to persistency is an excellent move. This must be defined in a manner that is practical to implement.
- Encourage a compensation system for agents that rewards renewals. Insurers need more flexibility in renewal commissions. Currently, the absolute amount of renewal compensation is low and many agents or intermediaries do not focus on this aspect.

Finally, a last word on term insurance. This is the purest and cheapest form of insurance. Typically, the proportion of term insurance steadily increases as a market matures. Therefore it is disturbing that term insurance has the highest lapse rates in the country. This clearly points to the need for educating customers about protection oriented insurance and ensuring that they have done a proper comparison of products and prices before making a purchase.

In the years ahead, I expect the spotlight to shine brightly on lapses; and as a result, lapses should reduce considerably.

A Deep Dive

- Life Insurance Lapsation

'Persistency, like perseverance, is not a long race; its many short races one after another' emphasizes Sandeep Arora.

The costs of acquiring new business are high, apart from the fact that the distributor's remuneration is also at its peak during the initial years. All this presupposes that unless the contracts run for their full time, it ends up as a losing proposition for the life insurers.

If buying of a life insurance policy is one big wise step taken by the policy holder, lapsation of the policy can mean forfeiting the opportunities of both financial and emotional

security associated with the policy.

Introduction

Lapsation is the bugbear of life insurers and a big concern as it eats into their future profits. Lapsation is extremely costly and its financial impact is significant as it adversely impacts the policyholder, the agent, the insurer and the industry in terms of forfeiture of premiums paid, cost of acquisition not fully recovered, loss of renewal commissions and drain on resources.

Life insurance contracts are long term in nature and the product design anticipates high levels of policy continuation at various policy vintage levels (policy years). The costs of acquiring new business are high, apart from the fact that the distributor's remuneration is also at its peak during the initial years. All this presupposes that unless the contracts run for their full time, it ends up as a losing proposition for the life insurers.

Simultaneously, failure to keep the contracts in force can end up in a huge loss to the policyholder on account of the risk of not achieving the goals for which the policy was planned. The basic purpose of obtaining life insurance – to serve as a safety net for his dependents in the unfortunate event of the loss of the breadwinner – itself takes a beating and could lead to the possibility of the dependents being economically/financially orphaned.

While no single factor can be isolated for lapsation, the insurer and the distributor have to play an important role in financially educating the customers to enable them to take wise decisions on purchasing a life insurance policy and continuing the premium payment i.e. not lapsing the policy.

Decoding the term - Lapsation

In order to understand the impact of lapses, it is necessary to understand the different types of lapses. The term "lapse" is not directly defined in the insurance legislation, except to the extent that "a policy which has acquired a surrender value shall not lapse by reason of non-payment of further premiums but shall be kept alive to the extent of the paid up sum assured..." (Section 113(2) of the Insurance Act, 1938).

Also, Regulation 2(1)(vi) of IRDA (Treatment of Discontinued Linked Insurance Policies) Regulations, 2010, defines discontinuance as the state of the policy that could arise on account of non-payment of premiums by a ULIP policyholder within the period allowed under the Regulations (which is typically 75 days from the due date for non-monthly modes).

Lapse is defined in different ways in insurance literature. Lapse definition also varies with type of product and its features. Overall, a policy lapses if the premium is not paid or can't be supported by the policyholder/policy fund value at the end of grace period.

There can be cancellation or termination of policies from inception for reasons such as the policyholder exercising the free look option, cancellation due to non disclosure, cheque

आई आर ही ए दिदा

dishonor action etc. These are not considered as lapse.

Once the policy is lapsed it can be treated by the insurer in either of the following ways depending on the period for which the premiums were paid.

- Pure lapsed policy: The policy may be treated as a lapsed policy without any value i.e. the policy doesn't acquire any policy benefit payable to the policyholder during the period before reinstatement*. Policy lapsed in this way is called a pure lapsed policy.
- 2. Paid up policy: If premiums are paid for at least 3 years and further premiums not paid, the policy does not fully lapse for the benefits, but the benefits shall be pro-rated to the premiums paid. In the case of a paid up policy, while premium may not be paid, the policy continues to be on the books of the insurer.
- *- The policy holder can revive the lapsed policy, within a specified time, by paying all premiums and charges due on that date and proving insurability. This is termed as policy reinstatement.

Significance & Impact

Most vintage items have high value and it's said that 'Old is Gold'. This applies to life insurance policies as well. With vintage, life insurance policies become more beneficial and profitable to the policyholder and the incremental ROI is also high. Despite this fact, many insurance policies lapse due to varied reasons like ignorance, misguidance, relative lower appreciation in early years, etc.

Till about a year back, most of the insurers focused heavily on new business and persistency / retention of policies wasn't really the buzzword. Earlier a lower persistency might have resulted in higher profits as surrender charges in the initial years were significantly high. Not anymore.

With significant changes brought in by the regulator in terms of permissible charges in new products (Effective September 2010), persistency has become a big word for insurers now. Now persistency is synonymous with the financial health of the company.

At a broader level, insurance products are priced using the four basic factors; MIXP – Mortality, Interest, Expenses and Persistency. Persistency can be one differentiator for an insurer to price its products more competitively in the market.

Persistency becomes one of the major deciding factors as the acquisition costs involved which include the expenses incurred to market, sell, underwrite and issue a life insurance policy. The initial expenses thus incurred must be amortized through the collection of renewal premiums. Needless to say, if the acquisition costs are not recovered, the same would affect the financial interest of the company adversely. Improved persistency is not only in the interest of the company but also of the policyholder and the sales force. Lapsation adversely impacts the policyholder due to loss of risk cover and more often than not, forfeiture of the premiums remitted thus far. For the sales force, lapsation translates into loss of future renewal commissions. From an industry perspective, it may hamper the growth of business.

Impact on Life Insurer

A life insurer would incur losses if a significant portion of its policies lapse in initial years before the expenses can be recovered. Persistently high Lapsation, surrenders and cancellations will affect the growth of company's portfolio of business and its reputation in the market.

Pricing of products and valuation models make assumptions on year-wise lapse rates thereby projecting the profits / losses arising from such transactions. In the event of higher Lapsation in early years, when the initial expenses and commissions have not been fully covered; the life insurer can have higher overruns or losses. Normally the life insurer obtains the bulk of its profit in later years of the policy and its profit forecast will be defeated if higher proportion than expected take up the surrender values. Such gap on achieving assumed returns can lead to re-forecasting of capital requirements and strategy thereon.

Lapsation can also mean loss of goodwill, which can result in market share decline in the current competitive environment. Low persistency suggests a review of the quality of underwriting, new business origination

Lapsation adversely impacts the policyholder due to loss of risk cover and more often than not, forfeiture of the premiums remitted thus far. For the sales force, lapsation translates into loss of future renewal commissions.

If policyholder is disappointed at the sales process, then it is a permanent and irreparable loss to distributors. Further, insurers may also impose penalties due to lapsation, such as denying club membership associated facilities and fringe benefits.

\$

process, degree of distributor professionalism and customer service, to name a few. Impact of lapsation is high since persistency is an evaluation factor used by rating agencies while arriving at overall rating of the insurer. Probably, life insurer bears the maximum brunt of Lapsation.

Impact on policyholder

A lapsed policy ceases to provide insurance protection to the insured. It forfeits benefits under the policy and possible favorable terms later in the contract. A new policy would cost more, considering the current higher age and other related factors. Some insurers consider previous lapses as adverse factor while underwriting a new proposal. The pay back, which is part of the premium paid that cannot be forfeited, will never meet the expectations of policyholders. Certain products do not carry cash values, so they will not compensate any value on lapsation.

Unit linked policies yield good returns only in the long run. If there is an early lapsation, policyholders receive the blow, in that they may not have received any gains, not recovered the front end costs and also get deprived of the advantage of lower costs in the long run. Unit linked policies are priced such that the cost of insurance reduces with increasing accumulation value. So, lapsing of these policies prematurely deprives policyholder of these benefits. Even for the traditional policies, the policyholder will be at a huge loss as there would be higher surrender charges and possible loss of bonuses.

Impact on Distributor

Distributors do not get renewal commissions if the policy is lapsed. In this case, it is possible that they may be losing client which is more disastrous than losing commission. If policyholder is disappointed at the sales process, then it is a permanent and irreparable loss to distributors. Further, insurers may also impose penalties due to lapsation, such as denying club membership associated facilities and fringe benefits.

It is ironical that an incentive of renewal commission is not a sufficient incentive for an agent to pursue his policyholders to pay. In fact, no other industry offers continuous regular payouts to distributors which a life insurance policy offers. A highly persistent policy brings a regular income to the agent – if he serves the insurance company for 5 years, even after his termination the renewal commission is guaranteed – even after the agent's death after 5 years, hereditary commission is guaranteed to his family – clearly no other product can offer.

Why do Life Insurance Policies Lapse?

Now let us examine the reasons why generally the policies lapse. There are multiple factors at play that lead to policy lapsation. All or some of these could be impacting persistency of a life insurer at any given point of time. The spectrum of reasons leading to lapsation range from quality of sales, service, customer's financial literacy level, general outlook of economy, etc. Let's look at the reasons in more detail. Please note that the reasons mentioned below are in random order and could be of varying magnitude at each life insurer.

- Lack of proper need analysis at time of sale: Understanding the customer's financial requirements is one of the most critical factors impacting policy continuity. At times, this step is completely missed out or covered inadequately by the distributor. This results into customers buying a policy (product or ticket size or both) that doesn't adequately meet their financial objectives (tax benefit, protection or investment). In most cases the policyholders lose interest in the product over a period of time and the policy lapses. Policies not taken according to the financial capacity of the policyholder may not continue as he/she will find it difficult to pay for it.
- Distribution Factor: The quality of sales made by the distribution channel is one of the biggest factors impacting the persistency levels. Factors like rebating and churning are leading causes of lapsation. Levels of distributor's product understanding, selling skills, professionalism, commitment to business and overall attitude can be linked to quality of sale.
- Advisor's offering some part of their commission as discounts on initial premiums is termed as rebating. This could lead to the policyholder being enticed to

23 irda journal | august 2011

आई आर थे। ए **टोटा**

buy a premium size that he/she would not be able to afford later, thus leading to policy lapsation.

- Advisor's inducing the policyholders to lapse an existing policy to take a new policy is termed as churning. Advisor's objective could be earning high initial commission from new policy or meeting criterion for rewards and recognition (R&R). Policyholders are usually misled by such advisors on features and charges of new products while not explaining the opportunity loss of existing policies.
- Orphan policies: Rising attrition of distributors and increasing orphan portfolio are new challenges for insurers. When an advisor leaves or is terminated, the policies sourced by him / her become orphaned. At times, such terminated advisors misguide policyholders to discontinue their existing policies. Some policyholders also find it difficult to manage their policies through new assigned advisors; such policies pose higher risk of lapsation.
- Lack of adequate financial underwriting: If the premium paying capacity is not established at the time of underwriting by referring to proper income documents, it may result in policyholder contracting to pay premiums higher than his capacity.
- New product options: Availability of upgraded products with better features and returns can also be a motive to lapse the existing policy and go for the new one. This could result into replacement with newer products offered by the same insurer or with the products of another insurer. Further, if the original need for taking the policy has changed, policyholder could prefer discontinuing the policy.
- Policy Returns (ROI): Product returns in terms of cash / fund value, bonus rates, etc. may not meet policyholder expectations and the policyholder may find the product unattractive to continue. There is a possibility that some policyholders may not keep various policy and mortality charges in mind while calculating their return on premiums paid. It becomes more lopsided, if such returns are calculated in initial years

of the policy. In high interest rate regimes, products offering lower fixed returns become unattractive. This leads to high lapsation rates.

- Financial crisis of policyholder or adverse market performance: At times, due to general economic outlook, unexpected business constraints or priorities, the policyholder may decide not to pay or may not be able to continue paying premium for the policy.
- Lack of premium payment channels (Reach): As life insurers have expanded their operations to the interior most and remote parts of the country, choice of premium payment options / modes has got limited in such topographies. This poses challenge for policyholders to pay their renewal premiums and can lead to high lapsation rates for such policies.
- Customer service & complaints management experience: Policyholders getting repeated unpleasant experience with services of the insurer or the advisor may prefer to lapse or surrender their policies. Mis-selling complaints like selling regular premium policy as single premium policy or logging customer intended annual premium as semiannual, etc, are frequently reported. Any delay or no corrective action of such complaints may lead to lapsation.
- Ignorance of policyholder:
 (Unintentional lapsation): Many a time, the policyholders forget to pay their renewal premiums despite reminders from the insurer. Sometimes the premium reminders and other important insurer communication do not reach the policy holders due to low contactability. Common reasons for low policyholder contactability include incomplete contact details provided by the policyholder at proposal stage, data capture errors, wrong/self contact details provided by advisor, contact details not updated with insurer in case of address change by policyholder, etc.

If we analyze the data and trends on lapsation, certain factors like demographics, financial and socio-economic, etc. exhibit differential policyholder continuity patterns. Like the

ž

If the premium paying capacity is not established at the time of underwriting by referring to proper income documents, it may result in policyholder contracting to pay premiums higher than his capacity.

Business conservation or retention not only reflects the financial health of the insurer and ensures commission continuity for the advisor but also ensures that the customer interests and returns are safeguarded.

Â

decision to buy an insurance policy, the decision to continue renewal premium is influenced by a number of personal factors like age, gender, socio-economic background, marital status, education level, income level, etc.

- Lapse rates vary significantly between rural and urban customers. This can also be related to lack of communication, service reach, etc. in rural areas.
- Lower premium ticket size policies tend to have higher lapsation rates. While a small proportion of the same can be attributed to malpractices, policies purchased by people having limited resources are more prone to lapses.
- Quarterly and monthly modes of payment tend to have higher lapse ratios.
- Lapse rate is higher for younger policyholders most probably due to lower and uncertain income levels, greater job mobility and lack of appreciation of concepts like risk cover, family protection, old age provision etc.
- Lapse rate of female policyholders has been observed to be lower than that of their male counterparts.

Retention Strategy to Improve Persistency

Business conservation or retention not only reflects the financial health of the insurer and ensures commission continuity for the advisor but also ensures that the customer interests and returns are safeguarded. Persistent business is not only a source of continued income for insurer but also provides good publicity to the insurer.

Strategy or roadmap for persistency improvement will vary from insurer to insurer as the reasons at play for lapsation can differ to varied extents amongst insurers. The diagnostic list for persistency improvement drawn below is a holistic list and some factors can be of higher significance at an insurer depending upon its challenges and future plans.

Measures to curb lapsation and increase persistency:

Lapsation can be controlled by an insightful mix of proactive (P) and reactive (R) measures.

The proactive measures can help reduce instances of lapsation whereas the reactive measures can help reinstate the lapsed policies.

- Professionalize sales force & emphasis on need based selling: A well trained, passionate and professional sales force can bring in right selling to the customer and increase the life duration of the policies. Investment in training the resources (sales force) on professional conduct, selling skills, product features along with competition product benchmarking, service appreciation/understanding and relationship management goes a long way in building a professional sales force and healthy portfolio. Tools and measures like FNA (Financial need analysis) or life-stage mapping of customers can help decide the right product, right premium ticket, right sequence of plans etc to match customer's present and future requirements. Such services can also come as an additional benefit to the customers for their overall financial planning. Life insurers effectively doing the financial planning for the customer can gain his/her confidence and loyalty in the long term.
- Understanding and appreciating Persistency: Life insurance industry is evolving and direct channels of distribution are surfacing. The alternate channels of distribution evolved post liberalization in life insurance in last decade but still most of the insurance policies are purchased (or rather sold) through non direct channels where the policyholder's preferred touch point is the distributor. So the insurer needs to ensure that the distribution and servicing work force understands persistency and the ways in which it can be improved. Insurer needs to send updates on due dates and lapsed policies to the distributor in time so that they can impact the continuity of the policy.
- **Compensation strategies:** From an earlier focus of insurers on levelised compensation structure, of late the focus of insurers has been on heaped compensation structure. Both compensation structures have their pros and cons for insurers depending upon their current priorities and business lifestage. Life insurance being long tail

आई आर ही ए टोटा

business, levelised compensation structure resonates more with the overall architecture and can support persistency in a better way.

The heaped structure provides incentive to procuring business with high first year commission and gradually reduced renewal commissions. The levelised structure reduces the gap between first and renewal commissions.

- Linking Agent license Renewal norms to persistency: The regulator has laid directions on agent license renewals and the same is linked to defined minimum persistency levels. Such criterion along with compensation linkages to persistency can drive agents to focus on persistency. Similar norms can be looked at for other distribution channels to encourage and enforce persistency.
- Product features & flexibility: Combination of product charge structure and features impacts not only the sale but the continuity of a policy. IRDA keeps a close watch on this and ensures that norms are in place to safeguard the customer interest. Product features like premium mode switching, premium amount changes (reduction/ increase/holiday), portability between life cover and investment portion, product upgrade option (option of converting to newly launched variant more applicable for reduced price term plans) etc. can help the policyholder to modify the life insurance policy to his current financial state and match his financial goals in long term. Creativity and innovation of product and pricing teams at the insurer coupled with marketing teams getting voice of customer to match their requirements and preferences can go a long way to ensure continued customer patronage and loyalty.
- Prudent Financial Underwriting: The underwriting process should include assessment of customer's current and future financial capabilities and base the decision on policy and premium size on this as well.
- New age and expanded service options: All customers are not the same and have varying needs and preferences. Handling this diversity becomes more important and

critical when managing your existing set of customers. Premium payment options and customer request handling needs to be supported at multiple communication levels like website, contact center, SMS, e mail, branch, advisor etc. so that the customers can choose their preferred mode. Communication language also plays a big role in customer experience and can impact persistency. Multilingual communication can ease understanding of customers and can help address customer issues.

Grace Period & reinstatement window: Regulations provide for a grace period of 15 / 30 days depending upon policy payment mode, and the policyholder enjoys the complete benefits of the policy during this grace period. Reinstatement window or period is the period post lapsation in which the policyholder can reinstate the policy with more documents and checks if required as per product terms. Under the new pricing regulations for unit linked policies (effective September 2010), a notice of intimation of lapse must go to the policyholders within 15 days from the expiry of grace period if premiums were still not paid. If within 30 days of receipt of this notice, the customer does not still pay the premiums, the policy would irretrievably lapse.

There can be genuine reasons wherein the policyholder is not able to reinstate his policy like temporary financial constraint, long duration out of station travel, non receipt of communication from insurer, etc. Reinstatement period/window comes as a big respite to the policyholders.

Earlier non standard reinstatement period (of 2 years) may not be justifiable but an acceptable longer period than the current norms will benefit both policyholders and insurers.

• **Policyholder grievance Management:** Having a satisfied customer goes a long way in shaping the overall health of any business and it applies more so in long tail business like life insurance. While an insurer can put in place measures to have good sales, service, product options, etc. but customer satisfaction also depends on how they are

Creativity and innovation of product and pricing teams at the insurer coupled with marketing teams getting voice of customer to match their requirements and preferences can go a long way to ensure continued customer patronage and loyalty.

Persistency improvement is a journey and as we progress further, we will all agree that covering such steps is not the last mile of this journey, these may just be the first few miles that we have traversed so far.

Â

treated when they come up with their grievances.

Understanding customer grievance, providing a resolution and closing process gaps, if any, can build the insurer's reputation with customer and overall in industry as well.

A satisfied and happy customer not only continues with his policy but also influences many more to continue and buy more. Managing a positive publicity on being customer centric is tough but not impossible.

- **Customers connect & education:** Only if a company (in service industry) is accountable and responsible to the customer and available for the customer, it can expect to get its rewards i.e. growth by the customer. Being customer centric can be of limited use, if customer's needs, priorities and experiences are not captured and acted upon. Engagement marketing encourages policyholder's involvement in shaping the marketing strategy of a company. In contrast to traditional and direct marketing strategies, it accounts for policyholder's feedback shaping the brand's marketing strategy. Policyholder's feedback on experience and expectations should be captured by top and middle management meeting up with them on a regular basis. Such initiatives coupled with financial literacy programs create policyholder's connect to the brand / insurer. This not only helps persistency but also makes the customer its brand ambassador on ground over a period of time.
- Increasing policyholder contactability: Insurers need to invest efforts in policyholder data cleansing and upgradation. This ensures that adequate and updated information is available about the policyholder. Updated contact details ensure that communication reaches intended policyholders. This helps insurers achieve multiple goals including persistency improvement. Customer service initiatives for getting contact updates and additional contact information (e mail, mobile no., etc.) can come handy. Skip tracing (finding contactability of non

contactable customers) is an established practice in banking industry and can be easily replicated through in-house or outsourced efforts. Some insurance companies have already adopted such processes and are reaping the benefits of improved policyholder contactability.

Many insurers have invested in predictive analytics to arrive at segments of the policyholders that are prone to lapsation or have high propensity of lapsation. Such information mapped to policyholder preferred communication modes, can help retain and win back policyholders.

Conclusion

Persistency clearly comes out as the 5th 'P of marketing' for life insurers. The traditional 4 P's may be important at the customer acquisition stage but this 5th P is of vital significance in customer and product lifecycle.

Policies in force are not only a source of income but also can help price products competitively. Persistency improvement is a journey and as we progress further, we will all agree that covering such steps is not the last mile of this journey, these may just be the first few miles that we have traversed so far.

In this testing times for the insurers, where break even period is extending every year, persistency and related pro active measures are of and will continue to be of prime importance. Else the business drain through lapsation will act as a double edged sword taking away profits from insurer and reducing the earning of the distributors and the customers.

The Eccentricity against Electricity

- Need for Relook?

Sankara Narayanan avers that in light of the growing technology, the exclusion clauses of an electricity-related risk in a Fire policy may need to be reviewed.

What Fire Policy says!

Exclusion 7 of the Fire Policy reads as under:

Loss, destruction or damage to any electrical machine, apparatus, fixture, or fitting arising from or occasioned by over-running, excessive pressure, short circuiting, arcing, self heating or leakage of electricity from whatever cause (lightning included) provided that this exclusion shall apply only to the particular electrical machine, apparatus, fixture or fitting so affected and not to other machines, apparatus, fixtures or fittings which may be destroyed or damaged by fire so set up.

The origin of this exclusion appearing in Fire policies of insurers can be likened to Hull insurance where this clause is termed as "Dynamo Clause" and it was extended to Vessel on Fire Only cover.

The Dynamo Clause generally runs as follows:

This insurance excludes all loss or damage to dynamos, exciters, lamps, switches, motors or other electrical appliances or devices, such as may be caused by electrical currents, whether artificial or natural and will be liable for only such loss or damage to them as may occur in consequence of fire outside of the machines themselves.

The wordings of this clause in many of the Hull insurances are intended to exclude any loss by any internal fire accidents which do not spread to other machinery or any other apparatus but confined to the particular machine only when the cover envisaged is a Fire cover. Basically under a fire policy, for a claim to sustain there should be a naked fire. When an ignition takes place inside the enclosed area of a machine and there is a thermal decomposition of combustibles inside but does not spread to other parts of the machine or to the neighbouring area, the insurers under a fire only policy does not intend to cover such loss. Such an unforeseen, sudden and physical damage can be termed as a breakdown of the machinery. The reason for such a breakdown could be over-running of the machinery itself or excess load, short-circuiting due to loose wiring, self-heating because of increased thermal heat due to friction or any other such similar causes.

Interestingly, the exclusion has brought within its ambit the act of lightning, whose effect though is quite minimal due to short duration; it can result in phenomenal damage to the equipments and machinery due to conduct of high current. These momentary surges are referred as "spike effect", over-voltage etc. These surges are not visible but may leave a telltale effect in the form of a charred mark or may result in a fire following the surge or may damage the machinery or equipment without leaving any trail. For example: Insulation failure due to lightning surge. Approximately 5% of Interestingly, the exclusion has brought within its ambit the act of lightning, whose effect though is guite minimal due to short duration: it can result in phenomenal damage to the equipments and machinery due to conduct of high current.

When a building cracks or a carter is formed, insurers do not have a choice of repudiation if the loss is traceable to lightning. On the other hand if any electrical/ electronic machinery is damaged, will the policy pay?

Â

the insurance claims fall due to internal failure of equipments arising from lightning (Insurance Information Institute, New York). This could be slightly more in Indian conditions considering lesser awareness of surge protection installations.

Lightning often causes damage to electric wiring, phone systems, alarm systems, distribution control system and other areas sensitive to an electrical discharge. Any device that is disconnected or switched off may not ward off the lightning surge. Lightning surge has demonstrated that it can damage any equipment or machinery whether it is in line or switched off.

Insurance Claims – Acceptance Vs Rejection

Many a time questions are raised on the applicability of the exclusion clause in a fire policy in an electrical/electronic item which is damaged due to short-circuiting just leaving a trail of charred mark on the surface of the switch or any connecting device through which the current got transmitted.

In a Fire policy, which is a named peril policy, the term "lightning" is not defined. In the earlier version of the policy form, the term "lightning" carried "lightning followed by fire". It is explicit therefore, that in the present wording, lightning damage per se is covered whether it results in a fire or not. No doubt when there is fire following lightning, question is never asked and the claim becomes payable otherwise not excluded under the policy. But when there is no fire following lightning, tenability of the claim will be based on the type of asset that is struck by lightning. When a building cracks or a carter is formed, insurers do not have a choice of repudiation if the loss is traceable to lightning. On the other hand if any electrical/electronic machinery is damaged, will the policy pay? On a simple reasoning when damage to the building is paid, the same analogy applies to electrical/electronic machinery also, especially when the machinery is switched off or a disconnect device and when it is not "on line". Take the case of transformer manufacturing unit where the stocks of transformers are stored in the storage yard and they are hit by lightning. There could be an insulation failure or they could be a fire. Opinions have varied between acceptance and rejection of such claims. Those who favour are of the view that Exclusion 7 would operate only when the machinery is running and not otherwise. This would mean that when the current is switched off and due to surge, if there is going to be a damage of all the computers inside the insured's premises, the liability of the insurer would exist. Equipment which is disconnected stands a millimetre away from the online current inside the switch box. When lightning can jump millions of kilometres, a millimetre distance cannot prevent its flow and damage. Does this small distance of the current to the equipment make a real sense to accept liability? Or does it mean that there should be a physical isolation of device from the online current?

Principle of Ejusdem Generis

A curious reading of the exclusion shows that there is a trail of activity-over-running, excessive pressure, short circuiting, arcing, selfheating-which does occur and connotes a general state where there is running of the electrical machinery or apparatus. In stationary machinery disconnected from "on line", the major probability is "leakage of current by whatever cause (lightning included)", which is also excluded by a conjunction "OR". Leakage of current occurs due to faulty earthing. Electronic devices should also be treated on par with electrical items for this purpose since the former also requires low level of voltage.

The principle of "ejusdem generis" is being applied by the courts in the interpretation of contract wordings also. Under this rule of interpretation when a general word precedes a set of words, the general word would acquire only the meaning of the class of words that

ई आर ही ए देविय

precede it. If the general words have a genus, the succeeding word will acquire the same genus and should not be given a different canon of interpretation.

Applying this rule, the trail of activity defined in the contract exclusion refers to an occurrence in a general state of running equipment only. Hence the subsequent word "or leakage of electricity from whatever cause including lightning" should imbibe the same genus of its applicability to a running equipment. It therefore appears that the intent of the contract is to exclude only live equipment being hit by a leakage of current including the surge effect of lightning and not the equipment that is physically isolated or switched off preventing the flow of current. It is not clear whether court can give a larger sense and meaning to the terms "or leakage of electricity from whatever cause including lightning" than the class of words had intended. While the loss could be due to any cause, the effect of such cause as read from the class of words is intended only on live equipments.

Proxima causa under the Exclusion

Further, Fire policy does not cover "fire only" losses as is the case discussed above, but covers various other perils. Reading the whole of the contract with the exclusion, it appears the insurers are not interested in covering a breakdown loss happening due to various situations contained in the exclusion 7 arising out of lightning, but never intended to exclude a damage happening otherwise.

With the advancement of science, it is also quite possible for an insurer to identify whether mere browning of the switch board is due to selfheating or by the fire set up by lightning. Under law, the glow of the flame need not be observed at the time when it happened. Further, a fire of less than a millisecond is sufficient to fasten liability on the insurer. Under the exclusion fire need not engulf all the machines other than the originating machine. Proximate cause of loss traceable to fire is sufficient to satisfy the requirements of the policy under the exclusion clause. Unless the insurer concretely establishes a case of overrunning, self-heating etc, it seems that the liability continues to persist for the insurers. Interestingly in one of the textile mills, only one equipment inside the mill premises was found damaged by lightning. Upon a thorough investigation and literature survey, it was found out the cause was due to ball lightning. Lightning does not read codes, by providing lightning arrestor; the probability of loss is reduced.

Some of the insurers are now providing a modified electrical exclusion clause by which the originating point of fire is also covered though the breakdown losses are still not paid. There are still raging arguments whether a machine, apparatus, fixtures and fittings would mean the entire machine or a part of the machine due to usage of words fixtures and fittings under the exclusion clause.

Nevertheless this remains an area of concern for insurers as they should never forget to address a bona fide loss under the policy.

The author is Underwriting Manager, SBI General Insurance Co Ltd, Chennai Branch Office.

It appears that the intent of the contract is to exclude only live equipment being hit by a leakage of current including the surge effect of lightning and not the equipment that is physically isolated or switched off preventing the flow of current.

Global Terrorism Insurance Market

- An Overview

Dr. Renu Verma and Dr. Manisha Singh write that with the terrorist attacks occurring more frequently, there is need for the terrorism related insurance to be more dynamic and easily available.

There is no dearth of uncertainties in today's fast paced life owing to various catastrophic disasters - both natural and man-made. According to a report by "Swiss Re Economic and Consulting, 2010", a surprising fact found was that man-made disasters have outnumbered the natural calamities happening in a year in the recent past. And the major factor responsible for this increase is the 'growing-by-the-day' terrorist activities worldwide. Most noteworthy fact is that these terrorist activities are increasing in spite of increasing government expenditure on security systems of the countries worldwide; and so are the losses incurred due to these attacks.

This paper is an attempt to study the reasons for the emergent need of terrorism insurance as a risk mitigating tool across the nations. It examines the present status of terrorism insurance market in global perspective. It also tries to throw light on various issues and challenges faced by Indian insurance market.

Terrorism Insurance – The need of the hour

Terrorism insurance affords protection against the risk of terrorist attacks. In other words, in terrorism insurance, the insured (individual or business house) is assured by the insurer (insurance company) of either partial or full compensation in case of loss caused to life/property due to terrorist attacks.

It would not be wrong to say that terrorism has emerged as the most threatening problem of the new millennium. This millennium on its onset, has witnessed terrorism in its worst form with the major terrorist attack of Sept 11, 2001 on World Trade Center in USA. Not a single year in the recent history of world has passed without a terrorist attack, whether big or small. The following table supports the fact that terrorism is one of the most serious problems world-wide:

	Terrorism Events in 2010					
Date	Country/Place	Event	No. of victims			
1/1/2010	Pakistan, Lakki Marwat	Car bomb explodes in a crowded volleyball stadium	101 dead, 60 injured			
20/1/2010	Mexico, Durango	Riots in Prison	24 dead			
18/2/2010	Pakistan, Terah valley	Suicide bomb attack outside a mosque	29 dead, 50 injured			
8/3/2010	Pakistan, Punjab, Lahore	Suicide bomb attack on a police intelligence unit	15 dead, 60 injured			

Date	Country/Place	Event	No. of victims
12/3/2010	Pakistan, Lahore	2 suicide bombings in residential area and shopping district	45 dead, 120 injured
29/3/2010	Russia, Moscow	Bomb explosion at the metro stations Lubyanka and Park Kultury	40 dead,160 injured
6/4/2010	Pakistan, Lowerdir, Timergarah	Suicide bomb attack on a political party rally	38 dead, 100 injured
7/4/2010	Kyrgyzstan, Bishkek	Clashes between demonstrator and police	75 dead, 1500 injured
10/4/2010	Thailand, Bangkok	Clashes between security forces and anti government protestors	21 dead, 312 injured
19/4/2010	Pakistan, North West Frontier	Suicide bomb attack on protest rally at Qissa Khwani Bazar	24 dead, 42 injured
22/4/2010	Thailand, Bangkok	Clashes between military troops and anti government protestors	3 dead, 75 injured
13- 19/5/2010	Thailand, Bangkok	Clashes between military troops and anti government protestors (over 30 buildings damaged)	65 dead, 544 injured
28/5/2010	Pakistan, Lahore	Bomb attacks on two mosque	80 dead, 107 injured
10/6/2010	Afghanistan, Kandahar, Arghandab	Suicide bombing at a wedding party	66 dead, 70 injured
10/6/2010	Kyrgyzstan, Osk, Jalalabat, Batken	Riots between ethnic communities	118 dead, 600 injured
1/7/2010	Pakistan, Lahore	Suicide bombings at shrine	50 dead
9/7/2010	Pakistan, Mohmand Agency	Suicide bombings at tribal meeting	105 dead
15/7/2010	Iran, Zahedan	Suicide bombings at mosque	27 dead, 270 injured
11/8/2010	Uganda, Kampala	Series of bombs explode on World Cup Final gathering	84 dead, 114 injured
1/9/2010	Pakistan, Lahore	Series of bombs explosions in Lahore	38 dead
2/9/2010	Pakistan, Lahore	Series of suicide bombings in mosques	35 dead
3/9/2010	Pakistan, Quetta	Suicide bombing at religious procession	65 dead, 150 injured
7/9/2010	Pakistan, Kohat	Suicide bombing at police station	20 dead, 50 injured

Date	Country/Place	Event	No. of victims
11/11/2010	Pakistan, Karachi	Suicide bombing at government building	20 dead
10/12/2010	Pakistan, Khyber- Pakhtunkhwa, Hangu	Suicide bombing at hospital	20 dead
24/12/2010	Nigeria, Jos	Series of bomb explosions at churches on Christmas eve	32 dead, 74 injured
25/12/2010	Pakistan, Khar, Bajaur	Suicide bombing at UN food distribution centre	45 dead

For an emerging country like India, terrorism issue becomes more sensitive in light of its relationship with its neighboring countries. Terrorism insurance has become a need-based insurance product gaining importance after 26/11 Mumbai terror attack. According to 'Maplecroft Political Risk Atlas 2010' India is in close proximity with countries ranking in top 30 list of extreme risk category. The news that world's most wanted terrorist who was killed recently was hiding just 100 km away from Indian boundary itself puts forward a strong case of greater terrorism coverage in India. Indian and global terrorism insurance market: A comparison

In totality, the global terrorism insurance market is in its nascent stage. However, it differs in various countries on the basis of features of terrorism insurance programs globally, extent and scope of coverage against terrorism, terrorism pool across the nations, different stakeholders in the coverage worldwide, and structure of premium rates for terrorism insurance.

Feature of the Terrorism Insurance Program across the nations				
Country	Program sponsored or supported by the Government	Mandatory/ Optional		
Australia	The act is federal & the ARPC is a government- backed corporation	Mandatory		
Austria	No support from the government	Optional		
Belgium	Government support but funded by the state, direct insurers and reinsurers.	Mandatory		
France	Private-public Partnership with unlimited state cover to CCR for GAREAT	Mandatory		
Germany	government is reinsurer in excess of €2B annual aggregate up to €10B	Optional		
Netherlands	Supported by government	Optional but		
		free of charge		
Spain	Government sponsored	Mandatory		
U.K.	Government supported	Optional		
USA	Government supported	Optional		
India	No Government support; managed by GIC (national reinsurer)	Optional

आई आर डी ए

A close analysis of the table reveals that, in most of the countries, terrorism insurance program is government supported. In developed countries, insurance market is much developed and needs little support from outside. Compared to that, in India the terrorism insurance market is in its infancy. Government support is absent which is necessary for ensuring the availability of terrorism insurance at appropriate premium rates.

Different countries have different norms as far as extent and scope of coverage against terrorism losses is concerned as shown in the following table:

Scope and extent of coverage						
Country	Scope of Coverage	Maximum Limits Applicable	Coverage for NBC			
Australia	Covers "eligible property" under "eligible insurance contracts" as defined by the Act. Principally PD/BI and also Public Liability are covered	Individual policy limits to apply to each policy holder. Overall supporting program limit A\$10.3B.	B&C but not N			
Austria	Flexa Perils & Bl	Up to €5M for PD/BI combined. Overall Pool limit is €200M for a single terror attack. An additional €20M available outside the pool at a high premium	NO			
Belgium	Workers' Compensation, Auto Liability, Strict Liability in case of fire & explosion, Accident & Illness coverage, Life insurance Property insurance for certain risks	Direct insurers, €300M; reinsurers, €400M; Belgian government, €300M Sublimit per location of €75M Property Damage	YES			
France	Applies to Property lines including Direct Damages & Bl	Per local policy. CCR covers all losses in excess of €2.2B. Below €2.2B is covered by the Terrorism pool	YES.			
Germany	PD/BI	€1.5B per insured. Total €10B on annual aggregate basis	NO			
Netherlands	Applies to all lines of business including all life insurance	€1B per year with a sublimit of €75M per insured per location for non-life claims	YES			
Spain	Property Damage, Bl, Vehicles & Accident	As per local policy	YES if part of a terrorist attack			
U.K.	Coverage available for PD/Bl	As per local policy issued	YES as long as covered in local policy			

Country	Scope of Coverage	Maximum Limits Applicable	Coverage for NBC
USA	Applies to most commercial P&C lines but excludes Crop, Livestock, Mortgage, Medical Malpractice, Health, Flood, Commercial Auto, Burglary and Theft, Surety, Professional Liability, Farm Owners Multiple Peril or Life insurance; reinsurance or retrocessional reinsurance.	Up to \$100B per year Same limits and sublimit as Property policy Insurers retain 20% of prior year earned premium and coinsure 15% of the loss above the retention	Eligible insurers are for NBC if they provide that cover, but there is no mandate to provide coverage broader than that which is allowed for other perils.
India	Residential, Industrial and Non-Industrial Risk	Rs 750 cr per risk per location	No
Taiwan	Personal Accidents Business	USD 32 million	No
Finland	Industrial and commercial risk	3 million Euros	No

PD/BI – Property Damage/ Business Interruption, N – Nuclear, B – Biological, C – Chemical, Flexa – Fire, Lightening, explosion, Aircraft

Source: www.willis.com, Compiled from websites of different countries

Most of the countries are providing protection against NBC losses but in India it is specifically excluded. In light of the fact that terrorists today are increasingly using sophisticated weapons of mass destruction, the exclusion does not look justified.

As far as limit of coverage is concerned, most of the countries, whether developed or developing, have better insurance coverage against terrorism risk than is the case with India. In India, the present limit of `750 cr. is too meager a sum to compensate in case of a major terrorist attack. Add to this, the coverage is for one location only. This means that a complex with 4-5 major industrial establishments, irrespective of all taking coverage worth `750 cr. each, would be treated as one location and the maximum amount that would be compensated to all of them combined would be `750 cr. only.

The next criterion to compare is premium rates which may vary according to the sum insured, location factor, risk category, property value etc. as shown in the following tables :

Terrorism Insurance Premium rates in India					
Sum Insured per location (MD + LOP)	Risk Category	Rate (per Mille) as on 1-4-2009			
Up to `750 cr.	Industrial Risk	0.30			
	Non-Industrial Risk	0.20			
	Residential Risk	0.10			
Over `750 cr. and up to `2000 cr.	First 500 cr. as per (1) above +up to Rs.2000 cr. balance Sum Insured as under :				
	Industrial Risk	0.25			
	Non-Industrial Risk	0.12			
Sum Insured per location (MD + LOP)	Risk Category	Rate (per Mille) as on 1-4-2009			
--	--	------------------------------------			
Over `2000 cr.	First 2000 cr. as per (2) above PLUS balance Sum Insured as under :				
	Industrial Risk	0.20			
	Non-Industrial Risk	0.12			

*Per-mille (‰): Per-mille or per-mill means parts per thousand. (One per-mille is equal to 1/1000 fraction: 1% = 1/1000 = 0.001)

MD - Material damage, LOP - Loss of Profit

Terrorism Insurance Premium rates in France:							
Sum Insured	Property and casualty line Basic commercial Premium rates						
Between 6 and 20 million Euros	6% of the coverage						
Between 20 and 50 million Euros	12%						
Between 50 and 750 million Euros	18%						
More than 750 million Euros	Premium rates on case by case basis						

Source: http://www.guycarp.com

Terrorism Insurance Premium rates in Germany:								
TIV (Total Insured Value)	MAC (Maximum annual compensation)	Premium amount and rates						
25 million Euros	25 million Euros	6250 euro, (0,025% of TIV and 0,025% of MAC)						
75 million Euros	25 million Euros	10 625 euro; (0,014% of TIV and 0,043% of MAC)						
200 million Euros	100 million Euros	84 038 euro; (0,042% of TIV and 0,084% of MAC)						

Source: Data based on Extremus Versicherungs-AG

Terrorism Insurance Premium rates in UK and USA:

Insurers in the Pool Re scheme, UK, are free to decide the price of the terrorism covers they offer to their customers. The most important factors tend to be the total value of the property, its location and whether the policy is to cover property damage only, or also business interruption losses.

under state regulations. Accordingly, there is price differentiation with respect to risk location in the U.S. Following is the example of average terrorism premium rates for the years 2003 to 2008:

Companies with TRIA- type coverage – All regions

 Premium per \$1000 of: TRIA Insurance (USA):\$0.592&property coverage:\$4.848

In U.S., TRIA leaves it up to insurers to set rates

Companies with TRIA- type coverage – New York region

 Premium per \$ 1000 of TRIA Insurance (USA):\$1.362& property coverage:\$6.149

Among the countries under analysis, majority have a system of determining the premium rates on the basis of single criterion i.e., sum assured or location. Compared to these countries, India enjoys a better position as the rates here vary on the basis of both risk involved as well as sum insured.

Challenges and issues in Indian context:

After comparing India with world terrorism insurance scenario, we can shortlist certain critical issues pertaining to Indian terrorism insurance market.

- India has terrorism pool out of which the ceiling for a single event per location loss is `750 cr. which is hugely inadequate. Beyond this limit, coverage has to be obtained from the international market.
- In almost all other countries under study, there is government support irrespective of the fact that terrorism insurance market there is far more developed than Indian insurance market. Indian terrorism insurance market at present is in its nascent stage and requires government support.
- For terrorism insurance business globally, the difficulty lies in determination of the premium charges. Here the risk cannot be modeled because of lack of data as well as difficulties in calculating the probability of occurrence of terrorist strikes.
- While determining premium rates, location factor is not taken into account in India. The rate of premium is same for all the places whether developed or underdeveloped. This poses a great challenge for the insurers

to develop their business in economically less developed areas.

Suggestions and Recommendations:

- Public private partnership is the key to success of the terrorism insurance sector. The government can either contribute or guarantee to compensate if the losses are enormous and beyond the capacity of the insurers. The government may also subsidize the premium till the market grows from its nascent stage to maturity.
- Quick and hassle free settlement of the claims is the key to the success of these insurance companies. On the one hand it will help build the trust of the people on the other it will also encourage more and more people to buy terrorism insurance.
- Innovation will help in providing better services and differentiating the products from that of competitor's. Newer and advance technology will lead to efficiency in operation and reduction in cost thus improving profitability. Customization of the insurance products to cater to the needs of all segments of prospective buyers ranging from small shopkeeper to a giant business conglomerate is the success mantra.
- Premium rates differentiation is also very important factor in which different rates can be charged on the basis of level of economic development. For example Delhi, Mumbai, Bangalore, etc. are much ahead in terms of economic development and therefore have higher risk probability compared to others. In such case, rates can be decided depending upon the locational factor.
- To encourage the safety practices as well as to lower the probability of an attack, the insurance companies can offer discounts in

premium rates on the basis of additional security measures adopted by the insured companies. Also, discount or lower rate may be offered if a client has been purchasing terrorism insurance policy for a long time without claim.

 Most of the times, the insurance companies do not have major claims against any of their policies and therefore have huge inflow of funds. In such a situation, these companies may play important role towards the corporate social responsibility by contributing a part of the premiums.

Conclusion:

Terrorist attacks today, have acquired an all pervasive and global nature. The risk of terrorism is proving to be a complicated and the most important challenge for the insurance industry, governments as well as the society as a whole. This problem requires consolidated efforts by all the stakeholders (government, regulator, insurance companies and policyholders). An integrated approach whereby all concerned parties, play their roles in a very positive and innovative manner, can help to develop this sector.

प्रकाशक का संदेश

कि व्यापार को दीर्घ काल तक बनाए रखने की संभावना बड जाती है। इसके उपरांत, प्रार्थी की वित्तीय स्थिति का सही-सही मूल्याँकन - न केवल प्रार्थनापत्र के समय परंतु प्रतिबद्धता के काल में भी -इससे आवश्यक रूप से व्यापार में घिसाव का स्तर कम हो जाएगा।

ऐसा कई बार कहा गया है कि बंद होने वाली कई पॉलिसियों का मुख्य कारण होता है छूट देने की हानिकारक पद्धति। जबकि इसे दण्डात्मक जुर्म की परिभाषा भी दी गई है, इस तथ्य की प्रशंसा की जानी चाहिए कि, इसे कडे आदेश के साथ लागू करने के स्थान पर यदि स्वैच्छिक रूप से त्यागने की परंपरा अपनाई जाए तो संभवत: वाँछनीय प्रभाव देखने को मिलेंगे। आगे, पॉलिसीधारक द्वारा पॉलिसी को उसकी संपूर्ण अवधी तक उसके वादों का पालन न करने का एक प्रमुख कारण गलत रूप से बेचना (मिस सेलिंग) भी है। इइ तथ्य को अधिक महत्वता देने की आवश्यकता नहीं है कि वितरक की भूमिका यह है कि उसे यह सुनिश्चित कर लेना चाहिए कि पॉलिसी प्रस्तावित को बेचते समय उसे किसी भी प्रकार से धोखे में न रखा जाए व पॉलिसी उसकी माँगानुसार होनी चाहिए तथा, उसे कोई भी गलत उत्पाद न बेचा जाए। हर हाल में, व्यापार को बनाए रखने के स्तरों में अत्यधिक प्रगति होने की आवश्यकता है ताकी जीवन बीमा का वास्तविक उद्देश्य की प्राप्ति की जा सके: तथा जीवन बीमा व्यापार को दीर्घ काल में भी सफलता प्राप्त हो।

जीवन बीमा में चूक जर्नल के इस अंक का केन्द्र बिंदु है। इस विषय की महत्वता को ध्यान में रखते हुए, अगले अंक का मुख्य विषय भी चूक रहेगा।

भे हो। नारायय

जे. हरि नारायण अध्यक्ष

जब जीवन बीमा करार सुस्पष्ट होते हैं, तो बीमाकर्ता समझते हैं कि करार अपनी पूरी अवधी तक चलेगा जोकि सामान्यत: कुछ दशकों तक चलेगा। उसी प्रकार, बीमाकर्ता निधियों के विस्तार के लिए अपनी समझदारी से वचनबद्ध हो जाता है ताकि संपत्तियों व ऋणों में संतुलन बना रहे। जब आशाकृत प्रीमियमों के आने पर दुष्प्रभाव पडने लगते हैं, तो वह निधि प्रबंधन के स्थाई प्रगति में अडचन पैदा करते हैं - फलत: उससे बीमा वित्तीय प्रबंधन में उलट-पलट की स्थिति बन जाती है।

अपितु, यदि पॉलिसीधारक के दृष्टि से इस पर नज़र डालें, प्रीमियम भुगतान के रूकने से समान रूप से क्षतिकारक समस्या उत्पन्न हो जाती है। सबसे पहले, जीवनबीमाकर्ता जो सुरक्षा अपने पॉलिसीधारक को प्रदान करता है वह अकस्मात अवरुद्ध होती है; तथा सुरक्षा जाल जोकि पॉलिसीधारक की असामयिक मृत्यु की अवस्था में उसके आश्रितों की सहायता के लिए दी जाती है, उसका अस्तित्व समाप्त हो जाता है। यहाँ तक की अन्यथा, इससे कई वित्तीय दुष्प्रभाव भी देखने को मिलते हैं, जैसे अदा किए हुए संपूर्ण प्रीमियम की हानि, भविष्य की जीवन बीमा आवश्यकताओं की प्रतिकूल रेटिंग, आदि; तथा अन्य और। इसके बावजूद इसलिए न-जीतनी की अवस्था पैदा हो जाती है, जीवन बीमा में चूक का स्तर ऊँचाइयों तक बढता जाता है तथा संभावित कारणवाचक तथ्यों की सूक्ष्म जाँच की आवश्यकता उजागृत हो जाती है।

भारतीय प्रक्षेत्र में जन साधारण में वित्तीय जागरूकता अभी भी वाँछनीय स्तर से नीचे बनी हुई है; तथा इस संदर्भ में, करार संबंधी उत्तरदायित्वों की सफलता के लिए वितरण चैनलों की भूमिका पर अभी ध्यान देने की आवश्यकता नहीं है। किसी भी संभावित की आवश्यकताओं की सही पहचान कर उसकी माँगों के अनुसार सर्वोत्तम समाधान प्रदान कर उसे संतुष्ट किया जा सकता है, जिससे

//

विनियामकों ने, राज्यों की ऋणशोधन क्षमता विनियमन व ग्राहक सुरक्षा की सबसे अग्रणी शक्ति को सुरक्षा प्रदान करते हुए ऐसे औजारों को विकसित करने में एक लंबा समय लगा दिया जो प्रतिस्पर्धात्मक वातावरण को सुनिश्चित कर सकें।

> सुश्री सुसन ई. वॉस एनएआईसी अध्यक्षा व लोवा बीमा आयुक्त

एशिया में बीमा प्रवेश दर अभी भी काफी कम है, तथा इसमें वृद्धि की स्पष्ट सार्थक अप्रयुक्त क्षमता है। इस क्षमता का अनुभव करने के लिए, यद्यपि, उद्योग को प्रवीणता के एक गहन कुण्ड का निर्माण करना होगा - जिसमें व्यक्तियों को जोखिम व एशियाई बाज़ारों की सुदृढ समझ हो।

श्री थार्मेन शनमुगरत्नम

उप प्रधान मंत्री व अध्यक्ष, मोनेटरी ॲथारिटी ऑफ सिंगापुर

हमारा मूल आधारिका यही है, कि विनियामक के रूप में हमें अपने विस्तृत संसाधनों को उन मामलों पर खर्च करने की आवश्यकता है जिनमें अत्यधिक जोखिम नीहित है। विनियामक संदर्भ में, जोखिम का अर्थ है - ग्राहक को नुकसान पहुँचाने की क्षमता।

श्री फिलिप हॉवेल

उपाध्यक्ष, कैनेडा का बीमा विनियामकों की परिषद

आचरण के मानक जो हमने देखे हैं, वह किसी और उद्योग में सहन नहीं किए जाएंगें। यदि एक सुपर बाज़ार ने अपने ग्राहक को सढा हुआ भोजन बेचा है तो वह कितने दिनों तक व्यापार में टिक पाएगा? वित्तीय सेवाओं के ग्राहकों को दी जाने वाली सेवाओं की उत्कृष्ठता की अपेक्षा यदि अधिक नहीं है तो वह उसमें बढोत्तरी की जानी चाहिए।

सुश्री मार्गेट कोल

अचारण व्यापारिक इकाई की अंतरिम प्रबंध निदेशक, एफएसए, संयुक्त राज्य

विनियामक होने के नाते आप अपनी अत्यधिक प्रभावशाली घटनाओं की बहुत चिंता करते हैं, चाहे उनकी संभावना कम हो, क्योंकि नतीजे अर्थव्यवस्था व ग्राहकों के लिए अत्यधिक कष्टदायक होते हैं।

श्री मैथ्यु एल्डरफील्ड

उप राज्यपाल, आयरलैण्ड केंद्रीय बैंक

भारतीय स्वास्थ्य बीमा उद्योग ने स्थाई वृद्धि दर को कायम किया है, जोकि बढते हुए आय स्तरों व स्वास्थ्य बीमा के प्रति जागरूकता का परिणाम है जिससे पिछले छ: वर्षों में सीएजीआर में 30% की वृद्धि हुई है। यद्यपि, पहुँच व उत्पाद भेंट अभी भी विषय हैं।

श्री जे. हरि नारायण

अध्यक्ष, बीमा विनियामक और विकास प्राधिकरण, भारत

||

ईश्वर के विरुद्ध व कठिनाईयों के विरुद्ध -संमक्ति घटनाओं के लिए तैयार रहे

आदित्य खन्ना व अनुराग सुंदर का विचार है कि व्यक्तिगत जीवनशैलियों व संस्थागत गतिविधियों में व्यापक बदलावों के चलते सक्षम जोखिम प्रबंधन की स्थापना की अत्यंतावश्यकता है।

...(पिछले अंक से आगे)

प्रशासन के मामले पूरे किसी भी अर्थव्यवस्था के वित्तीय क्षेत्र के ढाँचों को गिराने में सक्षम हैं, जैसे बैंकिंग प्रणाली या चरमावस्थाओं में अधिराष्ट्र की कमियों के कारण (संयुक्त राज्य, ग्रीस, आयरलैण्ड व अब पुर्तगाल)। देशों द्वारा 2008 में आँकडे प्रस्तुत करने के आधार पर यह निष्कर्ष निकला है कि आज कल निर्यात के स्थान पर घरेलु माँग के अनुसार तत्काल सामाजिक समायोजन हो जाते हैं जिसके परिणामवश मुद्रा समायोजन व सुरक्षणात्मक विधियाँ कार्यान्वित की जाती हैं। उसी ओर, प्रशासनिक असफलताओं के कारण गैरकानूनी गतिविधियों को प्रोत्साहन मिलता है जोकि और अधिक प्रशासनिक नाकामियों कि ओर अग्रसर हो जाते हैं जोकि एक अलौकिक कुँडली बनाते हैं। इस प्रकार की घटनाओं के एक प्राकृतिक अनूमान बीमा जगत के लिए अत्यधिक दबाव पैदा करता है। अव्यवस्था व बडी आपदा के काल में प्रवृत्तियों के अनुसार दावे कई गुना बड जाते हैं।

भारतीय निगमों के भौगोलिकीकरण के साथ साथ, नए बाज़ारों में प्रवेश, नए बाज़ारों में प्रवेश, नए बाज़ारों में ढाँचे खडे करने के करार, निवेश व नए औद्योगिक सम्मिलन, एक ऐसे जोखिम का सामना करना जोकि राजनैतिक हो वह अतिरंजित नहीं हो सकता। दोनों संस्थाएं चाहे वह सरकारी हो या निजि सभी विभिन्न स्तरों की संवेदंशीलता के शिकार होते हैं।

शासन - सरकार व निगम

शासनिक विफलताएं सूनियोजित जोखिमों को बनाती हैं व उन्हें बढावा देती हैं तथा अवयवों को अत्यधिक अनिश्चितताओं के लिए प्रकट करती हैं। इन जोखिमों ने हाल ही में कई संस्थानों के लिए जल-विभाजकों का काम किया है। मध्य पूर्व व उत्तरी अफ्रीक की हाल की अशांती की घटनाओं ने शासनिक व राज्यपालों के बीच बहिरा कर देने वाले अंतरालों को उजागर किया है। विश्वास की हानि, विश्वसनीयता, भरोसा, जीवन व अर्थव्यवस्था के उल्टा चलने से किसी को कूछ भी हासिल नहीं होगा। निगमों के लिए ऑर्थर एण्डर्सन, एनरौंप. लेहमें ब्रदर्स व 2008 की आर्थिक संकटों के प्रभावितों ने प्रशासनिक ढाँचे में कमियों को दर्शाया है। वापिस आएं, तो हम देखेंगे कि 2009-10 एक ऐसा समय है जो कि प्रशासन के नजरिये से सबसे खट्टा है। कारणों का सूक्ष्म-निश्लेषण करना, उनके झंझटों में पडना तथा जाँच पडताल के परिणामवश प्रशासन व / या विश्वास में कमी ही उसके निष्कर्ष होंगे जिससे कि व्यापार में आत्मविश्वास समाप्त हो जाएगा। भारत सरकार की नवीनतम फैक्टशीट 2011 में जनवरी 2010 की तूलना में 50% की गिरावट का संकेत देती है या जनवरी, 2010 की तुलना में आज तक के आधार पर 29% की गिरावट, संभव है कि यह प्रशासन में कमी का नतीजा हो |

आज कल निर्यात के स्थान पर घरेलु माँग के अनुसार तत्काल सामाजिक समायोजन हो जाते हैं जिसके परिणामवश मुद्रा समायोजन व सुरक्षणात्मक विधियाँ कार्यान्वित की जाती हैं।

Â

परिमित संसाधनां पर तकनीक व प्रयोगकर्ता के अचारण में बदलाव से संसाधन दक्षता में वृद्धि, माँग व दबावों को कम कर सकते हैं। संवहनीय खपत के लिए प्रोत्साहन, समग्र परिपेक्ष्य के द्वारा नियंत्रित किए जाने से इस जोखिम की प्रवृत्ति व प्रभाव को कम किया जाना चाहिए।

भू-राजनैतिक व भू-आर्थिक

भारत की देश की राजनैतिक सीमाओं से बाहर की बढती हुई व्यापारिक रुचियाँ, भारतीय व्यापार को राजनैतिक व आर्थिक जोखिमों के लिए प्रदर्शित करती हैं। इजिप्ट में हालही में हुई उन्नती, लीबिया व जापान में पिछले कुछ हफ्तों में; तथा संयुक्त राज्य व यूरोप के 2008 के आर्थिक गिरावटों ने इस कठोर वास्तविकता को जीवन में उतारा है।

मध्य पूर्व की हाल की घटनाओं ने कई भारतीयों को जो कुछ वर्षों या दशकों पहले ही वहाँ गए थे जड से उखाड फैंका, उन्हें वापस अपने देश आना पडा। जबकि इन घटनाओं में उनकी किसी भी प्रकार की कोई भूमिका नहीं थी, तब भी उन्हें अपनी जमा की हुई सारी जमा पूँजी व संपत्ति जो उन्होंने वहाँ रह कर अर्जित की थी सब छोड कर आना पडा। समान रूप से, वहा अर्थव्यवस्थाएं जिन्हें विशिष्ट कौशलों की आवश्यकता है या जो क्षमता में कमी को झेल रही हैं वह अब भारतीय पासपोर्टों के लिए वे रोक टोक खुले दिल से आहवाहन कर रही हैं। उसी प्रकार, कंपनियों का आह्वाहन किया जा रहा है या आज की राजनैतिक शासनपद्धति पर निर्भर किय जा रहा है।

वर्ष 2008 में हज़ारों प्रभावित भारतीयों को वापस अपने देश आना पडा था, जिनके पास पहले उनके दत्तक देशों में नौकरी नहीं थी या उन्हें पून: नहीं बूलाया गया, उन्हें संरक्षणवाद व कटूटर राष्ट्रवाद के साथ साथ नौकरी

के सामर्थ्य कि ओर के मामले तकनीकी हस्तक्षेप, उत्पादों की नई पद्धति आदि से सुलझाए जा सकते हैं। भारत जैसी एक उभरती हुई अर्थव्यवस्था जहाँ पर आज की तिथि में मिश्रित प्रगती की कामना की जाती है, इस प्रकार के द्रष्टिकोण अलग प्रकार के राजनैतिक परिपेक्ष्यों कि ओर ले जाएंगे। तकनीकी हस्ताक्षेप संयुक्त वृद्धि से गठजोड, लगातार बढते हुए मूल्य, वस्तुओं की कमी आज की तिथि में एक वास्तविक खतरा बने हुए हैं।

बीमा वातावरण के लिए इस प्रकार के तत्व यह दर्शाते हैं

कि वह रीतियाँ जिनकी प्रवृत्ति बडी आपदा के आकार

की होती है उनकी संख्या कुछ कम नहीं है। बाज़ार में

त्रास प्रतिक्रियाएं सामान्य हैं जहाँ प्रस्तुत उत्पाद बाज़ार

की माँग के मुकाबिले साधारणत: अपने प्रत्युत्तर में फेल

हो जाते हैं, जब उनकी अत्यधिक आवश्यकता होती है।

पूर्ती व मूल्य में चंचलता - वस्तु / कच्चा माल

निकट भूतकाल में भारत की वस्तु के मूल्य की सुभेद्यता

कई बार प्रदर्शित हुई है। 2008 के खाद्य संकटों से तथा

चीनी की कमी ने हमारे भंगुर वस्तु पूर्ती ढाँचे की तस्वीर

दिखाई है। निगमित संस्थानों के लिए वस्तुओं के मूल्यों

जैसे ताँबा तथा चाँदी जैसे धातुओं के मूल्यों की

चंचलता को प्रदर्शित किया है। अपरिष्कृत के बैरल के

अंतर्राष्ट्रीय मूल्य तथा कंपनी व घरेलु बजटों पर उसके

द्वारा निर्मित प्रभाव एक गहन चिंतन व वार्तालाप का

विषय हैं। कंपनियाँ न केवल इस प्रकार की चंचलताओं

से सुरक्षा घेरा बनाने का प्रयत्न कर रही हैं बल्की वह

दीर्घकाल के लिए कच्चे माल की पूर्ती की भी योजनाएं

बना रही हैं। इस प्रकार की घटनाओं को यदि बढती हुई

जनसंख्या के दीर्घकालिक नज़रिये से देखा जाए तो एक

ओर बढती हुई खपत के साथ साथ इन संसाधनों पर

अत्यधिक दबाव तथा दूसरी ओर घटती हई उपजाऊ

जमीन / उत्पादन, वाणिज्यिक प्रयोजनों के लिए ज़मीन

का स्थानाँतरण, इत्यादी भी स्पष्ट नज़र आती हैं। पूर्ती

परिमित संसाधनां पर तकनीक व प्रयोगकर्ता के अचारण में बदलाव से संसाधन दक्षता में वृद्धि, माँग व दबावों को कम कर सकते हैं।

ž

स्वरूप बदलाव कि ओर इशारा कर रहे हैं, कोई अतिशयोक्ति नहीं होगी। वार्तालाप का केवल एक बिंदु यही रहेगा कि हमें इसका प्रभाव कितना व कब देखने को मिलेगा।

वातावरण के बदलाव में इतने क्षमता होती है कि वह हमारे जीवन को एक असाधारण रूप में परिवर्तित कर देता है। यह तापमान प्रवृत्ति को बुरी तरह प्रभावित कर सकता है, वर्षण व अत्यधिक वर्षा, सूखा, नदियों की धरातल पर बाढ, समृद्धि तुफान, तटीय बाढ व पर्यावरणीय स्वास्थ्य जोखिम भी। प्रकृति के प्रति हमारी बुनियादी व प्रबंधकीय अतिसंवेदनशीलता कॉमन वेल्थ गेम्स की तय्यारियों के समय सामने आ गई जब अनवरत वर्षा ने निर्माण प्रक्रिया को रोक दिया या उसमें परेशानी उत्पन्न की। आबादी के दबाव के साथ साथ सीमित संसाधनों की मॉंगें वातावरण की संवेदनशीलता को पूरी तरह से एक नए स्तर पर ला कर खडा कर देती हैं।

मैप्लेक्रोफ्ट के भौगोलिक अध्ययन के एक अंश के रूप अगले 30 वर्षों में वातावरण में बदलाव के संवेदनशीलता की श्रेणी में भारत दूसरे स्थान पर है। यह एक अर्थपूर्ण कथन है जिसके अनुसार हमें अब अपने जोखिम अभिज्ञता को प्राथमिकता प्रदान करनी होगी।

दैवीय घटनाएं ऐसे क्षेत्रों को प्रभावित करती हैं जिन्हें सुरक्षित समझा जाता है व मौसम की अनिश्चितताएं वातावरण के पूर्वानुमान के कृत्रिम मॉडलों के होते हुए भी और अधिक अपूर्वानुमेय हो गई हैं। आज भी मानसून का सटीक पूर्वानुमान ज्यूँ का त्यूँ पहले जौसा भ्रामक बना हुआ है। इससे व्यापार अपने पूर्वानुमानों व कार्यप्रणालियों की योजना की दृष्टि अधिक निश्चित नहीं है अत: इससे ब्राण्ड/ग्राहक की निष्ठ में वृद्धि हो रही है। एक्चुरियल हिसाब व संगत जोखिम प्रबंधन तकनीक में विकास की सहायता से इन क्षेत्रों में नोवोत्पाद संभव है।

प्रदान की गई थी। भारतीय आईटी की बडी कंपनियाँ तथा प्रतिष्ठा प्राप्त बीपीओ, जो अपना कारोबार अधिक दूरी से नहीं करना चाहते थे, उन्हें काफी असर पडा। हम किसी प्रकार की चूक या दलाली में शामिल नहीं थे फिर भी हमें एक बडा आघात पहुँचा।

जब भी हम उन परिदुष्यों, जिनके बाद वर्ष 2008 की मंदी जैसा आर्थिक भौगोलिक संकट पैदा हुआ था या हाल ही की भूकम्प की बाढ, सुनामी तथा आकस्मिक बाढ, की बात करते हैं तो हमें पता चलता है कि इन सब से भारतीय व्यापार की रुची प्रकट हुई है तथा इन्होंने बाज़ार में बढती हुए दिवालियापन के चलते ग्राहकों की भूलों का सामना किया है। यह एक कठोर सच्चाई है कि इस प्रकार की खरीदार की चूकें उन सभी देशों में सामान्य हैं जिनसे भारत के व्यापारिक संबंध हैं। एक विशिष्ठ ऋणशोधन खोज के अनुसार - हाड्मैन एण्ड कं., संयुक्त राज्य की निगमित ऋणशोधन क्षमताओं के चलते 8 से 21% के बीच बढोत्तरी होने के आसार हैं।

जैसा कि हमने अफ्रीका तक अपने टेलिकॉम, लेटिन अमरीका में तथा उसके आस पास के क्षेत्रों में पेट्रोरसायन, अफ्रीका व यूरोप या आस्ट्रेलिया में खदान में रुची, के कारोबार को पहुँचाया है, इन परिस्थितियों में भू जोखिम को समझना व उसका सामना करना काफी जोखिमपूर्ण है। हाल में, भारतीय बीमाकर्ताओं पर भारतीय एम एन सीयों द्वारा बडी मात्रा में राजनैतिक, प्रतिष्ठा व अन्य जोखिमों के प्रति सुरक्षा प्रदान करने वाले उत्पादों के लिए कोटेशन देने का अंबार लग गया था। परंपरागत रूप से पॉलिसी वर्णन केवल थोडी बहुत सुरक्षा प्रदान करते हैं। क्या अब समय आ गया है कि इस प्रकार के अत्यधिक प्रभाव वाले जोखिमों से वैकल्पिक जोखिम हस्तांतरण का रास्ता निकाला जाए?

जलवायु संबंधी जोखिम

इस बात पर दूढता से कहना कि भारतीय मौसम के

परंपरागत रूप से पॉलिसी वर्णन केवल थोडी बहुत सुरक्षा प्रदान करते हैं। क्या अब समय आ गया है कि इस प्रकार के अत्यधिक प्रभाव वाले जोखिमों से वैकल्पिक जोखिम हस्तांतरण का रास्ता निकाला जाए?

तकनीक - चोरी एवं पुराना होने का जोखिम

आभासी दुनिया का नियंत्रण व वास्तविक दुनिया में क्षतियों पर काबू पाने की योग्यताइएं अभी तक पूरी तरह से मानचित्र पर नहीं लाई गई हैं। ऑनलाइन जुर्म अब पासवर्ड की चोरी से ऊपर उं चुका है, फिशिंग, क्रेडिट कार्ड चोरी, इत्यादी जोकि सरकार व प्रतिष्ठित व्यक्तियों को झकझोरने में सक्षम है। साइबर की दुनिया ने सरकारों, राष्ट्रपतियों व निदेशकों को अभूतपूर्व रूप से विकिलीक्स की सहायता से हिला के रख दिया है जोकि दुनिया के सबसे बडे खुलासे या चोरियाँ हैं। सामाजिक मीडिया यंत्र जैसे ट्विटर, फेसबुक ने भारत व हॉलिवुड के ख्यातिप्राप्त व्यक्तियों, मंत्रियों व शक्तिशाली खेल संस्थाओं के मुखियाओं को निष्पादित करने के लिए पर्याप्त मात्रा में हथियार मुहय्या कराए हैं। साइबर चोरी के द्वारा उन देशों जोकि आर्थिक दृष्टि से असमान हैं परंतु भौगोलिक संचार तकनीकों से परिपूर्ण हैं।

साइबर दुनिया की अर्थव्यवस्था अत्यधिक तीव्र व प्रभावशाली है। इसके पास कंपनियों के कार्यसंबंधी प्रणालियों पर डब्ल्यु एम डी, डेटा सुरक्षा, ब्रैण्ड व ग्राहक का विश्वास का अत्यधिक सुरक्षा कोष भी है। आज,

बीमा क्षेत्र की बदलती तस्वीर

जगेन्द्र कुमार का मानना है कि भारतीय बीमा बाज़ार आज आधुनिक तकनीकी से परिपूर्ण है, जिसका लाभ प्रत्येक वर्ग चाहे वह गाँवों में रहता है या शहर में, सबको मिल रहा है।

कम्पनियों के पास ऑनलाइन बिक्री के लिए मोटर, गृह, स्वास्थ्य ट्रेवल आदि अनेक उत्पाद है जिनमें क्रेडिट कार्ड, डेबिट कार्ड, नेट बैंकिंग से भुगतान के विकल्प उपलब्ध हैं।

Â

उदारीकरण के दौर में भारतीय बीमा क्षेत्र को निजी बीमाकर्ताओं के प्रवेश के लिए खोलने के 10 साल बाद आज भारतीय बीमा क्षेत्र का चेहरा काफी बदल गया है। ज्यादातर काम हाईटैक हो गया है। भारत में खेतीबाड़ी से लेकर यातायात और परिवहन तक नई नई तकनीकों का सहारा लेने से बीमा का बाजार भी अछूता नहीं रहा है। वर्तमान में टेक्नोलोजी पसन्द बीमा कम्पनियाँ भी अपने को हाईटैक कर रही है। इसके जरिए वे कारोबार में बढ़ोत्तरी फर्जी दावों पर लगाम लगाने और अच्छी सेवाएं देने की कोशिश कर रही है।

नई तकनीक नए कदम:

भारतीय बीमा कम्पनियां अत्याधुनिक तकनीक का इस्तेमाल करने में पीछे नही रही हैं। वे वाहन बीमा स्टेटस एस एम एस तकनीक, राष्ट्रीय स्वास्थ्य बीमा योजना के लिए बायोमेट्रिक कार्ड और पशु बीमा में एंबेडिंग तकनीक का प्रयोग कर रही हैं। यही नही आधुनिक तकनीक के क्षेत्र में किसानों को दुर्घटना, क्रिटिकल तथा फसल बीमा स्कीम मुहैया कराने वाली एक आम बीमा कम्पनी ने देश में पहली बार यूनिक कैटल क्लेम मैनेजमेन्ट सिस्टम का उपयोग शुरू किया है। जिसके तहत नवीनतम ब्लू चिप आधारित रेडियो फ्रीक्वेन्सी पहचान उपकरण बीमित पशु में लगा दिया जाएगा। इस तकनीक के जरिए बीमा कम्पनी अपने कार्यालय की कम्प्यूटर स्क्रीन के जरिए पशु पर नजर रख सकती है। इस तकनीक के जरिए फर्जी दावों पर भी लगाम लगेगी और किसान भी अपने पशुओं की देख रेख बेहतर तरीके से कर सकेंगें।

ई-मार्केटिंग

भारत में बीमा कम्पनियों द्वारा अपनाई गई ई-मार्केटिंग ने परस्परागत विपणन विधियों को बदल दिया है। ये ग्राहकों की खोज और उन्हें बनाए रखने में बदलाव की वाहक बनी हैं। बीमा पालिसी की ऑनलाइन खरीददारी के लिए कई चैनल हैं। कम्पनियों के पास ऑनलाइन बिक्री के लिए मोटर, गृह, स्वास्थ्य ट्रेवल आदि अनेक उत्पाद है जिनमें क्रेडिट कार्ड, डेबिट कार्ड, नेट बैंकिंग से भूगतान के विकल्प उपलब्ध हैं। कुछ कम्पनियों ने मोबाइल कामर्स सर्विस भी शुरु की है जिसके जरिए ग्रहक मोबाइल के उपयोग से बीमा पालिसी ले सकते हैं। यही नही बीमा ब्रोकर्स ने भी ऑनलाइन बिक्री के क्षेत्र में अभूतपूर्व योगदान दिया है, जैसे बीमा की शापिंग पोर्टल द्वारा बिक्री जिनमें इन्श्योरेन्स मॉल डाट इन, क्लिक टू इंश्योर इन, इन्श्योरेन्स पडित डाट काम, पालिसी बाजार डाट काम आदि। ये जीवन बीमा तथा गैर जीवन बीमा दोनों ही क्षेत्रों के उत्पाद बेचते हैं।

800 करोड़ रुपए का दावा:

सकता है।

विकल्प मौजूद हैं जिनमें फिक्सड प्रीमियम तथा वर्गानुसार प्रीमियम चार्ज करने की सुविधा है। पैकेज पालिसियों की बढ़ती माँग को देखकर बीमा कम्पनियाँ रिटेल सेगमेन्ट, स्माल मीडियम एन्टरप्राइजेस तथा बड़े उद्योगों के लिए भी उत्पाद बना रही हैं।

तुलनात्मक अध्ययन की सुविधा

बीमा बाजार में कार्पोरेट एजेन्ट तथा ब्रोकर जैसे मध्यस्थ चैनलों ने बीमा कम्पनियों के विभिन्न उत्पदों, उनके लाभ, प्रशुल्क दर, एड-आन तथा उपलब्ध लाभों के तुलनात्मक चार्ट बनाकर बीमा उपभोक्ताओं को सही उत्पाद चुनने में बडा सहयोग दिया है। बाजार में एजेन्ट तथा कार्पोरेट एजेन्ट तो केवल एक ही कम्पनी के उत्पाद बेच सकते हैं किन्तु ब्रोकर किसी भी; निजी या सार्वजनिक, जीवन या गैर जीवन बीमा कम्पनी का कोई भी उत्पाद कंही भी बेच सकता है। आज बीमा ग्रहाक ऑनलाइन इन्श्योरेन्स पोर्टल के माध्यम से एक साप कई बीमा कम्पनियों के उत्पादों की सम्पूर्ण जानकारी तुलनात्मक रूप से हासिल कर सकते हैं। इससे पेपर वर्क भी कम होता है तथा धोके की आशंका भी समाप्त हो जाती है।

(शेष अगले अंक में.....)

जगेन्द्र कुमार, कॉर्पोरेट हैड (ट्रैनिंग), श्रीराम जनरल इन्श्योरेन्स, जयपुर - 302020

के रूप में अब करीब आठ सौ करोड़ रुपए की राशि मिलने वाली है। सरकारी बीमा कम्पनी (ऐ.आई.सी) एग्रीकल्चर इंश्योरेन्स कम्पनी ऑफ इन्डिया लिमिटेड कूल 17 एकड़ की फसल के लिए बीमा राशि का भूगतान कर रही है। एक किसान को औसतन 13000 रुपए की राशि मिलेगी। फसल बीमा की 800 करोड रुपए की राशि पाने वाला आन्ध्र प्रदेश देश का पहला राज्य है। पिछले बर्ष भी अनन्तपुर जिले के किसानों के लिए 2006 के खरीफ सीजन की फसल के नुकसान के लिए 376 करोड रुपए की फसल बीमा राशि मिली थी। तब भी फसल बीमा की सबसे बडी रकम पाने वाला राज्य यही था। फसल बीमा सरकारी सहयोग पर ही निर्भर है। यह सहयोग कई प्रकार से होता है उदाहरणार्थ प्रीमियम सब्सिडी बीमाकर्ता के प्रशासनिक खर्चों की भर पाई ज्यादा जोखिम वाली फसलों को फिर से बीमा की सुविधा तकनीकी गाइडेन्स और वित्तीय सहायता आदि। फसल बीमा की सुविधा भारत के उतार चढ़ाव भरे मौसम वाले देश में किसानों के लिए बेहद कारगर है।

पैकेज पालिसियाँ

पहले केवल 100 करोड़ से ऊपर की औद्योगिक सर्व जोखिम जैसी पालिसियों में ही अनेक खन्ड मसलन, अग्नि, सैंघ मारी, मशीनरी, लाभ की हानि आदि शामिल किए जाते थे, किन्तु अब गृह बीमा, दुकानदारी बीमा, बैंकर्स ब्लैंकेट बीमा, ट्रेवल पैकेज, ओवरसीज मैडीक्लेम, पार्मर्स पैकेज, आदि अनेक उत्पाद बाजार में उपलब्ध है जो एक ही पालिसी में अनेक जोखिम खन्ड प्रदान कर मल्टीपल कवर के नाम से प्रचलन में हैं। इन पालिसियों से न केवल अलग अलग जोखिम के लिए अलग अलग पालिसियाँ लेन के झँझट से मुक्ति मिलती है बल्कि अधिक उपखर लेने पर प्रीमियम में भी छूट मिलती है। यही नही इनमें सीमित तथा असीमित बीमा राशि के

FICCI has been deeply engaged in the Health insurance space through its Advisory Board on Health insurance supported by senior representatives from IRDA, QCI, Healthcare providers, Health insurance companies, World Bank and other key stakeholders. In order to disseminate the work that FICCI's Advisory Board on Health insurance has accomplished, it organized a Health insurance conference at New Delhi on 19th July, 2011 with the theme "Efficiency in Delivery: Win-Win for Stakeholders". In addition, the Conference also aimed at discussing various strategies employed towards achieving universal access to Health insurance market.

Dr. Rajiv Kumar. Secretary General, FICCI welcoming Mr. J. Hari Narayan, Chairman, IRDA with a bouquet of flowers.

Mr. J. Hari Narayan delivering the key-note address.

On the occasion, Health Insurance Report 2011 was released. Seen in the photograph are (from L to R): Mr. Girish Rao, Chairman & Managing Director, Vidal Healthcare Services Pvt Ltd.; Mr. S.B. Mathur, Secretary General, Life Insurance Council; Mr. Thomas Mathew, Managing Director, LIC of India; Dr. Rajiv Kumar; Mr. J. Hari Narayan; Dr. Nandakumar Jairam, Chairman & Group Medical Director, Columbia Asia Hospitals, India; Ms. Sujatha Rao, Former Secretary, Ministry of Health and Family Welfare, Govt. of India; Mr. S.L. Mohan, Secretary General, General Insurance Council; and Mr. Antony Jacob, CEO, Apollo Munich Health Insurance Company Ltd.

"Licence. Registration. Insurance."

Not having the first two means trouble Not having the third is a serious problem

Motor Vehicle Insurance against Third Party Liability is mandatory under the Motor Vehicles Act. Non-compliance is a punishable offence. Ensure you have your Third Party Motor Insurance policy in place. You could also cover your vehicle against Own Damage risks to protect you against contingencies of loss/damage to your vehicle.

Read through the prospectus/terms and conditions of the motor policy and understand:

- 1. What the policy covers.
- 2. What the policy does not cover.
- 3. What excess/deductible the policy is subject to.
- 4. What is meant by Insured's Declared Value (IDV).
- 5. What you should do in the event of a claim.
- 6. What the scale of depreciation is and how it is applied when there is a claim.

Make sure you provide the Engine Number and the Chassis Number of your vehicle, apart from the Registration Number, while insuring your vehicle.

Regulators have made great strides in developing tools that ensure a competitive environment, while preserving states' front-line strength of solvency regulation and consumer protection.

Ms. Susan E. Voss

NAIC President and Iowa Insurance Commissioner

Insurance penetration rates in Asia are still very low, and there is clearly significant untapped potential for growth. To realise this potential, however, the industry has to develop a deeper pool of talent - people with a sound understanding of risks and Asian markets.

Mr. Tharman Shanmugaratnam

Deputy Prime Minister; and Chairman, Monetary Authority of Singapore

Our basic premise is that, as regulators, we need to spend our scarce resources on the issues that have the highest risk. In the regulatory context, 'risk' means the potential to cause harm to consumers.

Mr. Philip Howell

Vice-Chair, Canadian Council of Insurance Regulators

The standards of conduct we have seen would not be tolerated in other industries. If a supermarket sold rotten food to its customers how long would it stay in business? Expectations around the quality of service to consumers of financial services should be just as high if not higher.

Ms. Margaret Cole

Interim Managing Director of the Conduct Business Unit, FSA, UK

As a regulator you worry a lot about your high impact events, even if they are low probability, because the consequences are so severe for the economy and the consumer.

Mr. Matthew Elderfield

Deputy Governor, Central Bank of Ireland

Indian Health insurance industry has maintained steady growth rates, driven by rising income levels and an increased awareness of the benefits of Health insurance leading to a CAGR in excess of 30% during the last six years. However, the reach and the product offering are still very skewed.

Mr. J. Hari Narayan

Chairman, Insurance Regulatory & Development Authority (India)
